ab·o·li·tion (æbəliʃən) *n.* the act of abolishing ‖ (esp. *hist.*) the movement against slavery **ab·o·li·tion·ism, ab·o·li·tion·ist** *ns* [F. or fr. L. *abolitio* (*abolitionis*)] —The movement to abolish the international slave trade and the institution of chattel slavery was largely religious. It centered in Great Britain, the U.S.A. and western Europe, between c. 1783 and 1888. Following the pioneer work of Granville Sharp, the struggle was led by the Quakers, who had outlawed slavery in Pennsylvania as early as 1675. Under the leadership of William Wilberforce they obtained, almost single-handedly, the abolition of the slave trade in the British Empire and the U.S.A. by acts of Parliament and Congress in 1808. In England the struggle then became one for emancipation, while in the U.S.A. the act of Congress was blatantly defied. The U.S. movement, led chiefly by William Llyod Garrison, Theodore Dwight Weld, and Frederick Douglass, was obstructed by the U.S. Constitution's toleration of slavery and by the South's economic defense of it. Only after the Civil War could the 13th amendment outlawing slavery be enacted. In 1862 the U.S.A. adhered to an international agreement reached in 1842 affording the reciprocal right of search, which thereafter put an end to the slave trade

Preface

This book unites two prominent traditions of reference publishing that have thrived both separately and in combination. These are the encyclopedic and the lexicographical.

Encyclopedias. The encyclopedic tradition is the older, in the European context, being traceable to classical Greek times. Aristotle and the other early writers of encyclopedia-like works shared the impulse to gather a wide range of knowledge into one place, making it easier to expand and increase learning by giving a summary account of its present state.

The Christian Middle Ages, assuming the task of reclaiming classical learning and fitting it for the propagation of an invigorated faith, produced the immediate models of the modern encyclopedia. The pioneering work was the *Etymologiarum*, "the etymologies," of the 7th century Archbishop Isidore of Seville, later canonized. The so-called 12th Century Renaissance produced the most influential medieval encyclopedia, the *Speculum maius*, "the greater looking-glass," of the French Dominican friar Vincent of Beauvais. Vincent used the common medieval metaphor of "mirror" as an instrument for seeing things clearly and undistorted. His work consists of three parts: the *Speculum naturale*, dealing with natural history; the *Speculum doctrinale*, treating theology and the other subjects of the university curriculum; and the *Speculum historiale*. In printed editions of the 15th century, a *Speculum morale* was added by another writer.

The premier encyclopedic work that signaled the Renaissance and bridged medieval and modern times was Sir Francis Bacon's *Instauratio magna*, "the great renewal." It is fair to say that the medieval encyclopedists believed they were writing the whole and mostly permanent truth, whereas Bacon intended both to illustrate and encourage a revolutionary examination of the world in the scientific spirit.

During the full flow of the Enlightenment that succeeded the Renaissance period, leadership in encyclopedia making passed to France, with the publication between 1751 and 1772 of the *Encyclopédie, ou dictionnaire raisonné des sciences, des arts, et des métiers* ("Encyclopedia, or systematic dictionary of arts, sciences, and manual and mechanical trades"), edited by Denis Diderot and Jean Le Rond d'Alembert. Based on a translation of Ephraim Chambers' *Cyclopedia, or an Universal Dictionary of Arts and Sciences* of 1728, the beautifully printed and illustrated 17-volume French work established the principles of the modern encyclopedia. It is noteworthy that the set was not written by one person but was an edited compilation of articles by numerous authorities. Moreover, it was not addressed from experts to experts, in what is called the "monographic method," but to the general literate public.

Before the French Encyclopedia was finished, the first edition of *The Encyclopedia Britannica* appeared in Edinburgh, published by "a society of gentlemen in Scotland," and initiated the longest tradition of encyclopedias in English. The first nine editions, through 1889, were edited in the monographic method, but since the great 11th edition of 1910–1911, the *EB*, as it is called, has been a modern and authoritative monument. With the 14th edition of 1929 the ownership and editorship became American, so that the name is something of a relic.

The Encyclopedia Americana, the first considerable American encyclopedia, appeared in 1829–1833. First edited by Francis Lieber, it was to some extent a translation of Friedrich Brockhaus's *Konversations-Lexikon* of 1796–1808. The *Americana*, published by Grolier Incorporated, has been kept admirably up to date and employs a permanent staff of editors for continuous renewal.

Dictionaries. Single-language dictionaries, as distinct from glossaries and lexicons that give the native equivalents of words in foreign languages, are a newer artifact than encyclopedias and are clearly a consequence of some profound social changes: the spread of literacy, the rise of the middle class, and the increased access of women to the controlling circles of the culture. To take up the last point, the book considered by many to be the pioneer general dictionary in English was Robert Cawdrey's *A Table Alphabeticall*, which defined "hard words" for the "benefit and helpe of Ladies, Gentlewomen, or any other unskillful persons." "Hard words" lexicons like Cawdrey's were the rule for nearly a hundred years, until the appearance in 1702 of *A New English Dictionary*, probably the work of John Kersey. During the fifty-odd years before Samuel Johnson's dictionary, lexicographers such as Nathan Bailey, Thomas Dyche, and Benjamin Martin progressively perfected and modernized the English dictionary.

Dr. Samuel Johnson, known in his time and still reverentially regarded as "the Great Lexicographer,"

brought out his *Dictionary of the English Language* in 1755, and it is fair to say that all subsequent British and American dictionaries have resulted from imitating, updating, or improving that formidable work.

For example, it was the increasingly poor fit between Johnson's dictionary and the burgeoning and distinct American culture that stimulated Noah Webster to produce the *American Dictionary of the English Language* in 1828, a book in direct line of ancestry to the Merriam-Webster dictionaries of today. The absence of a healthy successor to Johnson caused Dean Richard Chenevix Trench and others, almost exactly a century after Johnson's dictionary appeared, to plan what they called *The New English Dictionary on Historical Principles*, which was published between 1884 and 1928, ultimately as the *Oxford English Dictionary*. The *OED*, as all who know it call it, was extensively updated by a four-volume supplement edited by Dr. Robert Burchfield.

Encyclopedic Dictionaries. The *OED* aimed to trace and define what it called the "common words" of English, and it set these apart from "the peculiar technicalities of trades and processes, of the scientific terminology common to all civilized nations," and from "an infinite number of *Proper* or merely *denotative* names, outside the province of lexicography." So doing it set a distinction between dictionaries and encyclopedias that has been prominent in the subsequent history of such reference books. Lexicographical purists have maintained that "a dictionary defines words, not things," while encyclopedists have pointed out that useful reference books might explain both word-words and thing-words without contamination. At best a rigorous distinction is difficult to maintain in the mind.

Debate between lexicographers and encyclopedists is still going on; this book confidently supports the encyclopedist side. In the history of lexicography it has forbears as respectable as the puristic faction. One need only mention Pierre Larousse's 15-volume *Grand dictionnaire universel du XIX siècle* of 1866–1876, the American William Dwight Whitney's *Century Dictionary and Cyclopedia* of 1889–1899, the Funk and Wagnalls *Standard Dictionary* and *New Standard* of 1913, as well as the Merriam-Webster series through the *New International, 2d Edition* of 1934.

The present book aims to combine the best features of the general dictionary and the short-entry encyclopedia, and hence to be of maximum usefulness to those who seek word-facts and fact-facts. In this effort, the editors have simplified the format by using a single alphabetical listing rather than separate ones for biographies, gazetteer, historical events, and so forth, and have not hesitated to give the encyclopedic entries the space they require.

History of the English Language

English is one of the major languages of the world. At the beginning of the 19th century, English was the native speech of barely 15 million people. Today it is used regularly by more than 320 million and is second only to Chinese, whose world primacy in number of speakers is accounted for largely by the vast population of mainland China.

Of the 3,000 or more tongues spoken today, about half a dozen predominate, having among their speakers two thirds of the world's population. English, as one of those influential and growing languages, is spoken in areas widely scattered over the globe. It is the native or official language of one fifth of the earth's land surface, being used throughout most of the North American continent and in the British Isles, Australia, New Zealand, and the Republic of South Africa. Of the languages of colonization it has been the one most important in Africa, Asia, and the islands of the central and southern Pacific.

At present, English is the most widely studied language in areas where it is not native. It is the chief foreign language taught in the schools of Latin American and European countries. In Japan, children begin the study of English in the seventh grade, and in the Philippines all classes are conducted in English from the fourth grade on. In India, English is an official language alternative to Hindi, the chief official language.

In addition, the use of English is widespread in international trade, international scholarship, and scientific research. More than half of the world's scientific and technical journals, as well as newspapers, are printed in English. Three fourths of the world's mail is written in English, and English is the language of three fifths of the world's radio stations. The Soviet Union and China use English to a great extent in their propaganda broadcasts to the developing countries of Africa and Asia. The U.S. Information Agency, with its centers and libraries in various countries, and the British Council and its English-language schools aid greatly in spreading the knowledge of English. As a result a speaker of English can travel around the world and almost never find it necessary in major cities to employ a language other than his own in order to be understood.

INDO-EUROPEAN AND GERMANIC BEGINNINGS

English belongs to the Germanic branch of the Indo-European family of languages. Indo-European is the major linguistic family of the world, in that languages belonging to it have the widest geographic distribution and are spoken by the greatest number of people. Several thousand years ago the "ancestral" language from which the Indo-European languages are all descended was the language of a comparatively small group of primitive people, apparently cattle-raising nomads of a Stone Age culture. The breakup of this Proto-Indo-European into a number of dialects is thought to have occurred around 3000 B.C., or earlier, when the original speakers supposedly began to migrate from east central or southern Europe.

Indo-European Family. The various Indo-European languages usually are divided into two groups—eastern and western. The chief languages in the western group, to which English belongs, are (1) Celtic, including the ancient tongue of the Gauls, whom Caesar conquered; the modern non-English languages of Wales, Ireland, the Highlands of Scotland, and the Isle of Man, and the language of Brittany in northwestern France; (2) Germanic, consisting of English as well as Gothic, German, Dutch, Flemish, Frisian, Danish, Swedish, Norwegian, and Icelandic, and local dialects spoken in Scandinavia, Germany, Austria, and Switzerland; (3) Greek, including the ancient and modern Greek languages and dialects; and (4) Italic, consisting of Latin with its modern descendants, the Romance languages—the chief of which are French, Spanish, Italian, Portuguese, and Rumanian.

Germanic Branch. Our concern is with the Germanic branch, since it includes English and its nearest relatives. It is divided into three main groups: East Germanic, North Germanic, and West Germanic. The chief dialect of East Germanic was Gothic, now known chiefly from fragments of a 4th century translation of the Bible by Ulfilas, the Arian bishop of the West Goths.

Modern Germanic Languages. North Germanic, derived from Old Norse, now includes the Scandinavian languages—Danish, Swedish, Norwegian, and Icelandic. West Germanic consists of two groups: High German and Low German. High German is so called because it was spoken originally in the southern highlands of Germany. Low German was the dialect spoken in the lowlands along the northern coast. High German is the standard language of present-day Germany. The Low German languages include Dutch, Flemish, Frisian, and English.

The nearest relative of English is Frisian, spoken in the Frisian Islands off the coasts of the Netherlands, Germany, and Denmark. That English is a Germanic language can easily be perceived by comparing it to German, Dutch, and Frisian—all West Germanic languages. The word *water* is common to English and Dutch, and other words are not very different in the two languages. The relation between English *That is good* and German *Das ist gut* is evident.

Characteristics of Germanic Languages. The Germanic group has features in common with the other branches of the Indo-European family, which are all inflectional and have a common word stock. But the Germanic group has its own individual characteristics. These are (1) the development of a weak verb conjugation along with the strong conjugation, (2) the twofold declension of the adjective as strong and weak, (3) a fixed stress accent, and (4) a regular shifting of consonants.

In comparing the Modern English verb, as representative of the Germanic verb, with the Latin verb, as representative of another Indo-European group, one can see the distinguishing characteristics of the Germanic verb. English verbs are of two classes: (1) The weak class, or conjugation, comprises the majority of verbs and is therefore sometimes called "regular"; a verb of this class forms its past tense and past participle by adding *-ed, -d,* or *-t* to the present or infinitive stem, as *work, worked, worked.* (2) The strong class forms its tenses by an internal change of the radical vowel of the verb, as *drink, drank, drunk.* Latin, however, expresses an idea by changing the form of the root of the verb, as *audiō* ("I hear"), the present tense, and *audīvi* ("I have heard"), the perfect tense. Latin verbs fall into conjugations distinguished by the vowel of the present active infinitive. There is no principle of tense formation in Latin so simple as that characterizing the English (Germanic) verb.

Just as the Germanic verb developed a twofold classification, so the Germanic adjective developed a twofold declension. The simple principle of it is that when a demonstrative, a possessive pronoun, or the definite article preceded the adjective or when it was used substantively (as a noun), it was declined in one way, called "weak." Otherwise, it was declined in another way, called

"strong." For example, the forms corresponding to *wise* in the Modern English expressions *wise men* and *these wise men* are *wise* [illegible] in Old English, and *weise Männer* and *diese weisen Männer* in Modern High German. Modern English does not distinguish between the weak and the strong forms, having lost all declension of the adjective. But the earlier presence in English of the two forms shows that English belongs to the Germanic group—because of its history, not because of its present usages.

The third trait characterizing the Germanic languages is the fixed accent. In Germanic, the stress became fixed upon the root syllable, whereas the word stress in Indo-European was free or variable. In Modern English we can generally recognize native words, as distinguished from those that have been borrowed from some non-Germanic tongue, by observing the stressed syllable when affixes are added in forming new words. For example, compare Modern English *friend', friend'ly, friend'ship, friend'liness, unfriend'ly* with *pure', purify', purifica'tion* and to *cin'ema, cinemat'ograph, cinematog'raphy, cinematograph'ic*. The native word *friend* keeps the accent on the root syllable, but *pure* and *cinema*, borrowed from the Latin and Greek, respectively, shift the accent as affixes are added.

The fourth distinctive feature of the Germanic languages is the almost regular shifting, according to a certain pattern, that particular Indo-European consonants underwent in these languages. For example, *p* became *f*, and *t* became *th*, as seen in the Latin *pater* and English *father*. Linguists became aware of this consonant shift as a result of studies in the early 19th century. This knowledge has helped them in grouping the Germanic languages, in discovering the derivation and history of their vocabularies, and in finding out which words are borrowed and which are native.

GENERAL LINES OF DEVELOPMENT

Historically, Modern English is the result of a number of tribal migrations and invasions. Before the first of these, the linguistic ancestors of English-speaking people were wandering along the northern coast of Europe, using Low West Germanic dialects so similar to one another that members of the various tribes could understand one another.

Invasions and Their Results. About the middle of the 5th century A.D. [illegible] Jutes—began a successful invasion of what is now England, or a mass migration into it. The gradual fusion of their three dialects resulted in Old English. By the end of the 6th century the former inhabitants of England—the Celts—had been killed, driven into Wales, or enslaved, and the Anglo-Saxons were securely established. English held sway in England. Only some place-names and a few ordinary words of the Celts remained.

The second major invasion was that of the Vikings, which began as a series of raids about the 9th century and also developed into a mass migration. Their language gradually merged with the related Anglo-Saxon dialects, and a great deal of interchange and borrowing of words occurred. Raids by the Danes continued throughout the 10th century, and in the early years of the 11th century Danish kings actually reigned in England. The linguistic consequence of the Viking invasion was a considerable injection of Scandinavian words into English. Examples are the nouns *sky, skull, egg,* and

The third invasion to have a major influence on the language was the Norman Conquest, led by William the Conqueror in 1066. The Normans were descendants of Vikings who had earlier settled in [illegible]

Another, but peaceful, invasion was that of Latin, which began in 597 A.D., when the Roman missionary St. Augustine arrived in England and converted the kingdom of Kent to Christianity. Thus began an influence that has continued to enrich English through Latin borrowings.

Subsequent Trends. English developed and changed with the passing of time, as do all living entities. During the long period after the Norman Conquest when English was neglected in favor of French, English became practically a spoken dialect. At this time it was transformed into a new standard speech, casting off much that was superfluous and borrowing from its rival, Norman French. By the time it emerged again as a literary language, around 1200, it had assumed the form known as Middle English.

Middle English is Old English changed first by French influence and second by the transforming power of popular speech. The consequences were profound. From a rather highly inflected language, English changed to one of few inflections; and as inflectional endings were lost, so was "grammatical" gender, which gave way to "natural" gender. Along with the simplification of the grammatical structure went an increase in vocabulary and idiom, principally under the influence of the French language.

As a product of two merging strains, Germanic and Romance—French is a Romance language, descended from Latin—English became a language capable of expressing a wide range of thought and feeling, as exemplified in the works of Chaucer, the greatest literary figure of medieval England. Chaucer wrote in the East Midland dialect, which had risen to a commanding position among three competing forms—Northern, Midland, and Southern.

East Midland was the dialect of London, the capital and metropolitan center of England, politically, commercially, socially, and intellectually preeminent. It held a middle course between the more conservative Southern dialect and the more advanced Northern, and developed into the speech Chaucer used. It is also the dialect from which standard Modern English is derived.

In the Modern English period the people of England followed a generally peaceful line of development in their thought and language, as they were not subjected to foreign invasion or any extensive external ethnic influences. The language developed along with the political, industrial, and intellectual growth of the country and of the world as a whole.

THE THREE PERIODS OF ENGLISH

Considered in more detail, the periods of English are (1) the Old English (Anglo-Saxon) period, starting with the coming of the Germanic tribes into England—traditionally 449 A.D.—and ending around 1100; (2) the Middle English period, 1100–1500; and (3) the Modern English period—from 1500 to the present, with the Early Modern English period extending to about 1700.

Old English. In Old English there were four main dialects—Northumbrian, Mercian, Kentish, and West Saxon. Two of these were Anglian: Northumbrian, spoken north of the river Humber, and Mercian, spoken in the Midlands between the rivers Humber and Thames. Northumbrian was the language of the first significant literature and the best of Old English literature, including the epic poem *Beowulf*. Kentish was the dialect of the Jutes, who lived in the southeast. West Saxon—the chief Saxon dialect, spoken south of the Thames—is the dialect in which the great bulk of Old English writing has come down to us.

The reason for the preeminence of West Saxon is that in the 9th century the center of culture and influence, formerly in Northumbria and then in Mercia, shifted to Wessex, the home of the West Saxons. Most of the prose was originally West Saxon, inspired by Alfred the Great, who succeeded to the West Saxon throne in 871. The poetry, chiefly Anglian, was copied by West Saxon scribes, whose transcriptions have been preserved. The early West Saxon period centered on King Alfred, who was not only a military leader, successful in opposing the Danish invasions and keeping peace, but also a champion of learning. Late West Saxon centered on the writer and churchman Ælfric, whose works, dated mainly in

the late 900's, have made him a major figure in the development of English prose.

Spelling and Sound. The following is the West Saxon version of the Lord's Prayer, from Matthew 6 of the King James Version of the Bible:

At first glance the passage may seem strange because of the differences between Old English and Modern English spelling. The character *æ* spells the sound of *a* in *hat*, and the characters *þ* and *ð* are used as *th* is used in Modern English. Many differences in sound exist. Modern *our* developed from *ūre*, the first vowel of which sounded like *oo* in *moon*. The word *hlāf* is the ancestor of modern *loaf*, although we have lost the *h* sound and changed the vowel, which sounded approximately like the first vowel in *father*. Old English had some sounds that do not occur in Modern English; for example, the sound represented by Old English *y*, which may be approached by pronouncing *i* in *sit* with the lips rounded. This was a rounded front vowel with approximately the value of German *ü* or French *u*. In later English this sound disappeared, and *y* was used interchangeably with *i*.

Other words that can be recognized in this passage are *eart* (archaic second person singular form of the verb *be;* present *are*), *heofonum* (*heofon*, with dative plural ending; Modern English *heaven*), *nama* (*name*—nominative singular, weak declension), *eorðan* (*earth*, with dative singular ending, weak declension), *forgyf* (*forgive*, imperative form), *gyltas* (*guilt*, with accusative plural ending), and *forgyfað* (*forgive*, with present indicative plural ending).

Some words in the passage have undergone changes in sound, which are reflected in altered spellings; for example, the combination *æg* in *dæg* became in Middle English a diphthong, *æy*, illustrated in Modern English *day*. Actually, more than 70% of the words in this passage are still current, though changed somewhat in spelling and pronunciation and occasionally in meaning. The word order is also different from that in Modern English. At the beginning we find "*Fæder ūre*" instead of "Our Father."

Grammar and Vocabulary. From the passage, it is clear that in grammar Old English is more highly inflected than Modern English. There are various case endings for nouns, numerous endings for adjectives, a more complicated system of pronouns, more person and number endings for verbs, and the like. Nouns had four cases—nominative, genitive, dative, and accusative. Adjectives had all these plus an instrumental case. In Modern English, nouns have only two cases—the common case, for both subject and object, and the possessive—and adjectives have no case at all. However, to express relationships, Modern English employs a more rigid word order and more structure words, such as prepositions and auxiliaries, than did Old English.

The vocabulary of Old English is likewise different from that of Modern English. Most of the words were native words, though there were borrowings from other sources. Some words were coming in from Norse, and others had been taken over from Latin. Even while the Anglo-Saxons were still on the Continent, they had adopted from Roman merchants such Latin words as those from which *cheese, kitchen,* and *wine* are derived, and more Latin words came into English after the conversion to Christianity—for example, the original forms of *candle, cloister, creed, dirge,* and *font*. However, only about 400 to 500 words of Latin origin appear in Old English manuscripts.

Middle English. Sometime between the years 1000 and 1200, numerous significant changes took place in the structure of English, and Old English became Middle English. The transition was gradual and did not proceed at a uniform rate in all dialects. In the North, where changes were earlier and more rapid than in the South, the dialect had already definitely assumed the appearance of Middle English by the year 1100, whereas the Southern dialect remained essentially Old English until at least 1150.

The main difference between Old English and Middle English was the great reduction in inflectional endings. This development resulted chiefly from a change in the way words were accented. In the Old English period, a general or distributed stress existed, spread over the word as a whole, thus preserving the full inflectional endings. In the Middle English period the stress shifted to the first syllable, weakening and obscuring the later syllables.

Another factor contributing to change was the complete overthrow of the English social and political system that accompanied the period of Danish rule and, somewhat later, the Norman Conquest. For several generations, confusion reigned and the language developed in an untrammeled and popular way, since the constraints of a rigid social system were removed. The usages of the uneducated were not held in check by conservative forces, and the old standards of correctness were more or less forgotten as the language followed the free impulses of the people. Consequently, when the language achieved a stable literary form in the time of Chaucer and his predecessors, it was very different from that of Alfred and Ælfric.

Changes in the Sound System and in Grammar. Owing to the shift in word accent, the final syllables of words, particularly inflectional syllables, tended to become weak and eventually disappeared. The development of a standard word order compensated for the loss of inflectional endings. In general, the *-um* of the dative plural of nouns and adjectives appeared as *-un, -on, -an,* or *-en*, the last form becoming the predominant one and finally weakening to *-e*. Likewise, all unstressed end vowels leveled under the vowel *-e*, which was later dropped. The present participle in early Middle English ended in *-inde* in the South, *-ende* in the Midlands, and *-ande* in the North. These presumably merged with certain nouns naming actions, which regularly ended in *-ung* (present *-ing*), as in *learnung* ("learning").

As the vowel endings leveled, the classification of nouns disappeared. So did grammatical gender in favor of the natural gender of Modern English. With the loss of grammatical gender in the noun went the loss of agreement in inflection between the noun and its adjective. The same leveling of inflectional endings, therefore, took place in the adjective as in the noun. Only one ending persisted after the loss of those indicative of gender—the vowel *-e*, which marked the plural number and the weak inflection of the adjective.

That Middle English is closer to Modern English than Old English can be seen from lines of Chaucer's Prologue to the *Canterbury Tales*:

> A knyght ther was and that a worthy man,
> That fro the tyme that he first began
> To riden out, he loved chivalrie,
> Trouthe and honour, fredom and curteisie

Changes in Vocabulary. In addition to the changes already mentioned, there were great changes in vocabulary. French words from all walks of life came into English. In some instances we have pairs of words, one from Norman French and one from Parisian French, as in *catch, chase; cattle, chattel;* and *warden, guardian*. The Latin *ca* was preserved in Norman French but was changed to *ch* in Central French. Likewise, many Norman words begin with *w*, whereas the Central form is *gu*.

Many of the borrowed words dealt with things in which the French influence was strong—government, law, religion, and military affairs. Illustrations are *reign, court, revenue, clergy, faith,* and *sergeant*. Architecture, literature, and science, as well as fashion, dress, and social life, added terms like *sculpture, palace, pillar, romance, tragedy, surgeon, anatomy, clock,* and *tournament*. Many words were introduced that had to do with the table and preparation of food, such as *appetite, beef, veal, pork, pastry, broil,* and *boil*. These and thousands of others were added to the English vocabulary between 1100 and 1500. Yet the very core of the vocabulary remained English. The pronouns, prepositions, conjunctions, and auxiliaries and many ordinary nouns, verbs, and adjectives were not supplanted by borrowings.

Latin words, along with French, continued to be added to Middle English. An important source of Latin borrowings was Wycliffe's translation of the Bible into English. The French and Latin borrowings made English a richer language, with many synonyms. For example, one finds *ask* (Old English), *inquire* (French), and *interrogate* (Latin). Flemish, Dutch, and Low German also contributed a number of words, such as *deck, dock,* and *freight,* as a result of the constant communication between England and the Low Countries, principally in connection with trade. The greatest contribution, however, came from French.

The use of French words in Middle English texts gradually increased, reaching its height between 1300 and 1400, the period in which English was reestablishing itself as a national language after some 200 years. English began to be used in the schools, and in 1362 a parliamentary statute required its use in the King's courts. Eventually, the laws of the land were in the language of the people, and a literary standard English, based on the normal spoken English of the London dialect, had been established to a considerable extent, through its use by such writers as Chaucer, Wycliffe, Malory, and Caxton.

Early Modern English. Between the years 1500 and 1700, the language developed many of the features that characterize it today. Some of these came as the result of basic linguistic changes, and some followed in the wake of the Renaissance and other movements—social, political, religious, and scientific.

Linguistic Changes. Between 1400 and 1600, English experienced changes in sound that made Shakespeare's language quite different from that of Chaucer. One modification was the loss of an unstressed vowel sound at the end of some words. For example, *space, grace,* and *large* were pronounced as two syllables by Chaucer but as one by Shakespeare. The *-e* represented a vowel sound for Chaucer. It was not "silent." Likewise, the modern words *looked* and *loved* would have had two syllables for Chaucer. These changes were significant in that they affected thousands of words.

Another alteration was the systematic shifting of some half a dozen tense vowels and diphthongs in stressed syllables. For instance, Middle English *mine* had the vowel of modern *we,* whereas *we* was pronounced like *way. Louse* in Middle English sounded like modern *loose,* and *noon* had the vowel of *known.* This shift, known as the Great Vowel Shift, affected most of the long vowels and all the words containing them.

Changes Brought About by the Printing Press. The invention of printing, which William Caxton introduced into England about 1476, released a force that was to have an almost immeasurable effect on both language and thought. In time, books were available for all, not merely for the favored few. More and more people learned to read and write, and education increased. On the English language itself, the chief effect of the invention of printing was to be in making the language more uniform and in standardizing it.

Effects of the Renaissance. The main influence on the development [illegible] Renaissance, which exerted its greatest force in England during the period of 1500–1625, enabling Englishmen to partake of the cultural riches of the rest of contemporary Europe as well as of the ancient world. The study of the classics was stressed, and the enthusiastic classicists deliberately attempted to enrich the English [illegible].

Thousands of words poured in from the classical languages. [illegible] came in from Greek through the Latin. Some like *catastrophe* and [illegible]

of Latin words was strengthened by the borrowing of French words, which continued from the Middle English period. In many cases it is difficult to determine whether a word came directly from Latin or came in through French, for many Latin words were entering French, and French was passing them on into English.

Along with the learned words from Greek and Latin in the Renaissance period came loanwords from more than 50 languages, the major sources being the three Romance languages, French, Spanish, and Italian. Words like *detail, genteel,* and *surpass* poured in from French. From Italy came *balcony, piazza,* and *portico.* Spain contributed *alligator* and *armada.* Many words also came from other parts of the world as a result of exploration, trade, and colonization.

The classicists were concerned not only about vocabulary but about style as well, their chief models being such writers as Vergil and Cicero. Many works, therefore, were translated in the great effort to improve the English language. Among the most famous were Sir Thomas North's translation of Plutarch's *Lives* (1579), an important source for Shakespeare's plays; and George Chapman's translations of Homer, which began to appear in 1598. One important classicist, Sir Thomas More, wrote his *Utopia* (1516) in Latin. But the man who no doubt had the greatest influence in spreading the use of Latin was William Lily (or Lilye), the first high master of St. Paul's School in London and the author of a famous Latin grammar that was used by Shakespeare and his contemporaries, as well as by later generations of students. Among the Greek scholars were Thomas Linacre, William Grocyn, and John Colet. The great Dutch humanist Erasmus taught Greek at the University of Cambridge at this time.

Reaction Against Classicism. As strong as the humanistic movement was in Renaissance England, growing patriotism produced a healthy pride in the use of English. Some Englishmen thought that their language should depend upon its own resources. To them, importations from foreign sources meant corruption. Among the linguistic purists holding this theory and praising English were George Pettie, who expounded his position in his *Civile Conversation* (1581; 1586), a translation of a work by Stefano Guazzo; and Richard Mulcaster, the author of the principal treatise on English spelling in the 16th century and the teacher of Edmund Spenser. Spenser supported his master by praising the riches of the English language, by reviving old words, such as *astound, doom, ydrad* (for "dreaded"), and by coining new words, many of which were derivatives of old ones, such as *wrizzled* (probably from "wrinkled" and "frizzled").

Men like Sir John Cheke, first regius professor of Greek at Cambridge, opposed the introduction of inkhorn (pedantic) terms from Latin and Greek. Among the followers of Cheke were Roger Ascham, the tutor of Queen Elizabeth I and the author of *Toxophilus* (1545), a dialogue on archery in English, and of the more famous educational treatise, *The Scholemaster* (1570), and Sir Thomas Elyot, author of what has been called the first book on education written and printed in English, *The Boke Named the Governour* (1531). Others were Thomas Wilson, author of the popular *Arte of Rhetorique* (1553), and Richard Carew, author of *The Excellencie of the English Tongue* (1614). Sir Philip Sidney praised English as a tongue equal to any other. Despite these advocates of English, the Latinists triumphed for a time. Children had to learn Latin at school, to the neglect of English.

Reemergence of English. But once more English emerged and established itself. Its position in the nation had not been questioned, for it had continued as the language of government and of trade. Then came three great English poets, all within a century: Spenser, "the poet's poet" of the English Renaissance and the great advocate of the English language; Shakespeare, the popular, unequaled dramatist and the outstanding literary artist of Early Modern English, credited with using 90% of native words in his working vocabulary of 20,000 to 25,000 words; and Milton, who wrote both in Latin and in English but chose English for *Paradise Lost,* his great blank verse epic. These three literary giants, along

with many other poets and prose writers, have proved the richness and flexibility and power of the language.

The prose writers of the Renaissance not only borrowed words from Latin but also imitated the Latin style as illustrated by John Lyly in his *Euphues* (1578). In striving for elegance, he employed an excessive use of antithesis, alliteration, and far fetched similes, cultivating a highly self-conscious and artificial language. The Renaissance writers favored the ornate, although there is one notable exception—the King James Version of the Bible.

Effects of the Reformation. Biblical translation has had a great effect on literary style in Modern English, beginning with the translation by Wycliffe and his friend and collaborator John Purvey in the 14th century. As a result of the Reformation many translations appeared. The first of these was William Tyndale's, which established a standard on which the others were based, including the King James (1611). This literary monument is noted for its native vocabulary and its simplicity and beauty of phrase. The fact that native words make up 94% of its vocabulary has placed it in the forefront of English prose writing and accounts for its powerful and widespread influence on English style.

Summary. With the heritage of the European Renaissance and the Reformation, the influence of the printing press and of increased popular education, and the influx of new ideas from around the globe, Early Modern English, through its experimentations and innovations, gradually became the language of scholarship, replacing Latin. It likewise produced a body of literature unequaled at any other time. The authors of the Elizabethan Age were inspired, highly imaginative, versatile, and experimental, giving to the world writings of all types—long narrative poems, sonnet sequences, lyrics, songs, romances, histories, literary criticism, and, above all, dramas, the greatest since the Golden Age of Greece.

Development Since 1700. After 1700, many movements and countermovements characterized the history of English, one of which was the attempt to regulate and control the language. The freedom of the Renaissance disappeared, and in its place came order and restraint. Formulation of rules began; efforts were made to stabilize the language—to determine what was right and what was wrong. Many demanded an academy, similar to the Académie Française, to decide on correctness of language and, in effect, to legislate on the permanent form of English. Chief among these advocates were Dryden, Swift, and Defoe, who did not wish English to be corrupted. They wanted it to be pure and eloquent.

18th Century. This authoritarian attitude reached its height in the 18th century, the age of reason and logic. The idea of an academy failed, but the desire to stabilize the language resulted in the development of the dictionary and a great interest in grammar.

The first English dictionary, by Robert Cawdrey, had appeared in 1604, briefly explaining 2,500 "hard words." Many others followed, making gradual improvements, until Samuel Johnson's *Dictionary of the English Language* was published in 1755. It dominated the field for about a century and paved the way for the monumental *Oxford English Dictionary*, the standard authority for the history of English words, published during the period 1884–1933. It laid the foundation for the great advance in lexicography that has continued to the present.

The doctrine of "correctness," supported by the authoritarian sense of order and conformity to a standard, was responsible for a succession of English grammars based on Latin rules of grammar and written by grammarians who had no knowledge of the processes of linguistic change. The influence of the most popular of these grammars—one by Robert Lowth, published in 1762, and another by Lindley Murray, in 1795—is still felt.

There were, however, a few thinkers who realized that all linguistic problems could not be solved by logic and that standards must be based on usage. Chief among them were Joseph Priestley, author of *The Rudiments of English Grammar . . .* (1761), and George Campbell, who wrote his *Philosophy of Rhetoric* in 1776. The principles established in such works as these were the forerunners of the modern doctrine of usage, which, basic in all sound investigations of linguistic questions—that is, that usage and social acceptance determine correctness.

While authoritarian English was being codified lexically and grammatically at home, the British Empire was expanding around the world and extending tremendous influence. Supremacy in trade on the high seas and political supremacy among far flung colonies brought Britain into contact with strange lands, peoples, cultures, and climates. As a result, thousands of new terms poured into English from around the globe, resulting in a more cosmopolitan vocabulary. From the North American Indians came words like *hickory, persimmon, squash;* from Mexico, *chili, coyote;* from South America, *alpaca, llama, pampas;* from India, *bungalow, cashmere, chintz;* from Africa, *chimpanzee, voodoo, zebra;* and from Australia, *boomerang, kangaroo, wombat.*

19th and 20th Centuries. In both Britain and the English-speaking areas abroad, the romantic period, following the conservative 18th century, was a time of liberalism in literature and language. Obsolete words were revived, and new words were coined. In Britain, great changes were occurring in society, making it more democratic, and the upper and lower classes were brought closer together by industrial reforms. Greater economic and cultural advantages came to the common man, aided by the first cheap newspapers around 1870, by cheap postage about 1840, and by great advances in science.

The large circulation of the newspaper afforded a means of renewing the language, of approving its informal, colloquial usage, and of bringing the spoken standard closer to the written. Means of telecommunication and of travel were likewise increasingly improved and speeded up, thereby bringing the people of the world closer and closer together and enlarging the English vocabulary by word borrowings from many areas. Scientific progress also meant development of the vocabulary, since each new technological advance brought a new stock of words. Thus the vocabulary increased by leaps and bounds as one scientific development followed another in the 19th and 20th centuries.

LEXICAL GROWTH AND CHANGE

The ever-increasing size of the English vocabulary results from a variety of processes, mainly of two kinds: (1) processes of growth, through which words enter the language, and (2) processes of change, whereby words already in use undergo alterations in meaning.

Methods of Forming Words. Although there are many words of unknown origin, there are almost no "originals"—words created without a source of some kind. The following represent the chief sources of the English vocabulary:

Borrowing from Other Languages. The English language has vast debts. In any dictionary some 80% of the entries are borrowed. The majority are likely to come from Latin, and of those more than half will come through French. A considerable number will derive directly or indirectly from Greek. A substantial contribution will come from Scandinavian languages, and a small percentage from Portuguese, Italian, Spanish, and Dutch. Scattered words will be from various sources around the globe. The vocabulary has grown from the 50,000 to 60,000 words in Old English to the tremendous number of entries—650,000 to 750,000—in an unabridged dictionary of today. The bulk of the words spoken and written by English-speaking people, however, are native words, the nine most frequently used being *and, be, have, it, of, the, to, will,* and *you.* Borrowed words are nevertheless immensely useful in enriching the vocabulary and making the language flexible and resourceful.

Compounding. The most evident method of forming new words is joining two or more words to make a new entry. It has been common in all periods of English. Some of the shortest and simplest-appearing words were formed originally in this way—for example, *hussy,* from Old English *hūs* and *wif* ("housewife").

Almost all parts of speech lend themselves to compounding, though some combinations are far more useful than others.

Examples of nouns formed by compounding are *houseboat* or *motorway* (from two nouns), *blackberry* or *greenhouse* (from adjective and noun), *popcorn* (from verb and noun), *touchdown* (from verb and adverb), and *downpour* or *output* (from adverb and verb). Adjectives so formed include *footsore* (from noun and adjective) and *overdue* (from adverb and adjective). There are also connective and particle compounds, such as *notwithstanding* and *mayfair*, and phrase oddities, such as *up-and-coming*.

Formation by Affixes. Another common process of word making is that of adding a prefix or suffix to a single word. Some affixes have existed from the Old English period, such as *un-*, *-ness*, *-less*, and *-ish*, in words like *undo*, *frankness*, *useless*, and *childish*. Examples of living prefixes—those that can be applied freely to new words—are *anti-*, *ex-*, *pro-*, *super-*, *hyper-*, *post-*, and many more. A similar morphological wealth is seen in the suffixes. Consider, for example, Latin *-ation* and *-ative*; French *-al*, *-able*, *-ous*, and *-ary* (all ultimately Latin); and Greek *-ist*, *-ize*, and *-ism*. The number of words formed by affixes is constantly growing.

Functional Shift. The free interchange of functions, whereby one part of speech is changed to another, is a significant feature of Modern English. Functional shift between noun and verb is common; for example, one may sew a *button* on a coat and then *button* the coat. But many other changes are possible. A noun may become an adjective, as in "*home* run," or an adverb, in "go *home*." An adjective may become a noun, as in "none but the *brave*," or a verb, in "*brave* the storm." A preposition may become an adjective, as in "a *through* train"; and an adverb may become an adjective, as in "the *then* minister."

Figures of Speech. In the creation of words, imagery plays a great role, as in the original combination *the day's eye*, which finally became *daisy*, now a fossilized image. Metaphors of this type are common in the English vocabulary, as can be seen from names of other flowers, such as *bleeding heart* and *lady's slipper* (or *lady slipper*). Likewise, imagery is evident in *numskull* (also spelled *numbskull*) or *pip-squeak* and in the various uses of the word *head*, originally naming a part of the body. Now, because of the resemblance in shape, we speak of a "*head* of cabbage," or in considering function, of the "*head* of a government." Metaphor also is used in the "*head* of a pin," but in "fifty *head* (of cattle)," synecdoche—the naming of a part to indicate the whole—is

earlier *sherris*, taken as a plural) and *pea* (from *pease*). Instances of the latter include *rove* (from *rover*), *beg* (from *beggar*), and *edit* (from *editor*).

"Initial" Words, or Acronyms. Combining the initial letters of a series of words to form a new word is another method of shortening. *NATO*, for example, is an acronym for "North Atlantic Treaty Organization." Not only may initial letters be used, but initial syllables or parts of words may be combined, as in *EUROMART* ("European Common Market") and *radar* for "radio detecting and ranging." Acronyms have become increasingly popular. In many cases one uses words like *laser* and *UNESCO* without knowing the words from which they were formed.

Imitation of Sounds. Some words are formed as imitations of natural sounds. These words are onomatopoeic, or echoic. Examples are *bang*, *crash*, *fizz*, *hiss*, *pop*, and *sizzle*. Some are iterative in form, as *tweet-tweet* and *pitter-patter*. Such imitative words are expressive and vivid.

"Name" Words. A limited but interesting group of words comes from the names of persons or places. The names of scientists, for example, have come to be employed as common nouns—*faraday*, *joule*, *ohm*, and *watt*. Words such as *epicurean*, *platonic*, *stoic*, and *jeremiad* remind us of classical and biblical times. Other "name" words include *cardigan*, *macintosh*, and *guillotine*. Words coming from place-names include *meander*, *canter*, *mackinaw*, *canary*, and *tweed*.

Blending. Telescoping two words into one, called "blending," is another process of word creation, as in *slide* (from *slip* and *glide*), *twirl* (*twist* and *whirl*), and *brunch* (*breakfast* and *lunch*). Other examples are *nucleonics*, *radiotrician*, *sportscast*, *astronaut*, and *smog*. Many humorous blends appear, such as *alcoholiday*, *slanguage*, and *insinuendo*.

Changes in Words. After entering the language, words continue to have a history. They change, even as people do, and many have varied "careers." The changes that occur may be considered under the following headings:

Degeneration and Elevation. Words may rise or fall in status. The word *villain*, which originally meant "farm laborer," is one example of degeneration in meaning. Others are *knave*, *imp*, and *varlet*, which at one time merely meant "boy"; *lust*, which meant simply "pleasure"; and *wench*, "young girl." Names for lowly positions for rural inhabitants (as opposed to presumably sophisticated city-dwellers), for foreigners, and for death are subject to degeneration and at times to euphemistic substitutions. For example, *cemetery* took the place of *graveyard*, but today in the United States, *memorial park*, *cloister*, and *burial abbey* are being substituted for *cemetery*, as are *casket* for *coffin* and *funeral car* for

Along with the many pejorative changes, one may observe the opposite tendency in a number of words. Some terms for position or rank have risen in prestige from lowly origins. Originally a *minister* was a servant, and a *marshal* was a stableboy who looked after the horses. In like manner, throughout the centuries a number of organized groups have accepted derisive names and have made them respected. Instances are *Quaker*, *Shaker*, and *Hoosier*. The word *fond* has risen from its etymological meaning of "foolish" to "affectionate," and *smart* has been elevated from an earlier meaning pertaining to pain to a meaning pertaining to mental alertness and elegance in dress or appearance.

Generalization and Specialization. In the process of change, words also expand or contract. At times a word acquires an extended meaning instead of the narrower one it once had. For example, the words *throw*—from Old English *þrāwan*, originally meaning "to turn, to twist"—has become so generalized that we are no longer aware of its having any connection with twisting. For centuries the word *free* meant "noble" or "of high birth." Gradually it has gained a wider sense until it now means "unre-

Far more frequent than the foregoing are words that have narrowed their significance. In Old English, the meaning of *wedd*

was "pledge." It appeared in the compound *wedlāc*, the second element meaning "an offering." The modern word *wedlock* has narrowed itself to one particular kind of pledge. The Old English *rēaf* meant "revenue," and *rape* signified any kind of forcible deprival. Many Modern English terms in science and all naturally specialized represent more generalized predecessors.

Exaggeration and Understatement. Meanings of words are also changed by the use of hyperbole, or exaggeration, and by understatement. Hyperbole—deliberate exaggeration—causes expressions of strength to diminish in effect and grow toward feebleness, as may be seen in the use of intensives. Adverbs like *awfully, enormously, frightfully,* and *tremendously* are now employed for quite trivial matters. Adjectives indicating approval and disapproval, such as *grand, gorgeous, superb, dreadful, horrible,* and *outrageous,* are employed similarly, thereby weakening the distinctive qualities of each word.

As there is "too much" in exaggeration, so there is "too little" in understatement, the tradition of which reaches back to the Old English period. Understatement is heard in such negative statements as "not bad," when giving approval. Another instance may be found in *rather,* which has been in English from the earliest period, although Old English *hraðe* had the meaning of "quick" and "early," rather than "preferred." The modern *rather* is the comparative of *rathe.* From the meaning "earlier," *rather* changed to include the idea of "prefer," as shown in Shakespeare's line from *Hamlet,* "And makes us rather bear those ills we have . . . ." In addition to signifying preference, *rather* has come to mean "moderately," as in "rather good."

Abbreviation and Extension. Abbreviating may affect the end, the beginning, or the middle, or a combination of these, of the words it shortens. Generally, clipped words lose sounds at the end as *gas* for *gasoline.* Occasionally a word will lose a sound or syllable at the beginning, as *mend* from *amend, tend* from *attend.* In each case here, the vocabulary has been enriched, for there is a useful differentiation in meaning between the original word and the abbreviated form. Phrase shortenings may be observed in *good-bye* from "God be with you" and *farewell* from "fare you (thee) well." The extension of words is not so prevalent as abbreviation. Occasionally a word adds an extra letter and perhaps an extra sound, as *thunder* (from *þunor*) and *sound* (from *soun*).

Metathesis and Folk Etymology. The kinds of changes discussed thus far result mainly in alteration of meaning. The changes caused by metathesis and folk etymology primarily affect the sounds. Metathesis refers to the interchanging of certain phonemes (speech sounds) by the human tongue, principally *l, r,* and *s,* as may be observed in the pronunciation *aks* for *ask.* The modern word *grass* was *gærs* in Old English; *bird* was *brid,* and *fresh* was *fersc.* Other words that show metathesis are *third, thresh,* and *through.*

In folk (popular) etymology, the form of a word is altered to make it reflect a fancied likeness to another word with which it has no connection but which it resembles in sound, as in *belfry* from French *berfrei* ("tower"). *Ber* sounded somewhat like *bell,* and everyone knows that bells belong in towers; therefore, *ber* became *bell* and gave us *belfry.* Similarly, *bononail* came from *ongenail.* The first syllable is from Old English *ang* ("pain"), but it has become *hang,* because *hang* seemed more plausible. Other instances are *mushroom* from Old French *mouscheron* and *cockroach* from Spanish *cucaracha.*

Shifts in Association. Each word is an idea-complex made up of a primary meaning with a number of associated meanings. For example, the basic meaning of *hasten* is "to set in motion, to start." But associated with this are other meanings, such as "readiness," "youth," and "birth."

The shift of association may be observed in the word *ambition,* from the Latin *ambitio,* signifying "going around." This meaning was applied to the going about of a politician to get votes, and the resulting secondary meaning grew to be the chief one attached to the word. Since politicians eagerly pursue a particular aim, the idea of going about became generalized, so that it denoted desire for anything that involved a struggle. To Shakespeare and Milton, ambition was not a good quality. But a later shift of emphasis was ameliorative, and today ambition is considered desirable and is even urged on youth. Thus we see four shifts in the development of the meaning of *ambition:* (1) "a going around," (2) "electioneering," (3) "evil pursuit of place or power," and (4) "initiative."

Similarly, *nice* has shifted from its etymological meaning "ignorant," through its early English sense "foolish" and later ones such as "particular" and "discriminating," to its broad meaning of "pleasant" and "desirable," although "discriminating" is still a living meaning.

Radiation of Meaning. It is the nature of a word to have one principal meaning with a periphery of associated meanings. One can see, therefore, why words multiply, either by splitting into two or more separate words or by gaining many key meanings so that they are employed in different contexts to indicate distinct things or ideas. This feature accounts for the doublets in the language—a pair of words from the same origin, differently derived. For example, in English we find *ward* (Norman French) and *guard* (Parisian French), both from the same Germanic source. Pairs from the Greek, the first being the earlier borrowing and the second the later, are *balm, balsam; blame, blaspheme;* and *priest, presbyter.* Other doublets in Modern English from the same root, one from Old English and one from Scandinavian, are *no* and *nay* and *shirt* and *skirt,* the first of each pair being from Old English.

That a word itself need not multiply in order to have radiation in meaning is evident from looking into any large dictionary. A simple word may have dozens of separate meanings, all developed by association from the same source. Each meaning develops a new referent and undergoes a semantic shift, as in the case of the "eye" of a potato or of a needle. A physical similarity causes a transfer of meaning. By this process, meanings of words are always broadening and shifting. We speak of the "legs" of a table, "hands" of a clock, "foot" of a mountain, and "root" of a tooth or even "root" of the matter," the last involving a higher level of abstraction. Many ordinary words such as *brand, break, color, deep,* and *draft* illustrate the radiation of meanings in English words.

PRONUNCIATION AND SPELLING

The English language has some 40 simple sounds plus 8 diphthongs, consonantal and vocalic. For expressing these sounds in writing, there is an alphabet of only 26 letters. It is therefore necessary for some letters to represent more than one sound. In fact, the letters and letter combinations express an average of five sounds apiece.

If the sounds of English are considered and an attempt is made to count the letters and combinations of letters that may represent certain sounds, the situation is indeed complex. For example, one may give a number of possible sounds with the spelling *ai*—as in *aisle, mail, said, pain,* and *porcelain.* Even more striking is the number of sounds connected with an unphonetic group of letters *ough*—in *bough, cough, touch, through, dough,* and *thorough.* The numerous spellings of the sound represented by the International Phonetic Alphabet symbol [ʃ] provide yet another instance: *chivalry, ocean, moustache, fuchsia, politician, schwa, conscious, nausea, shell, fashion, mansion, pressure, passion, initiate, position, complexion, anxious.* From these examples it is evident that the present alphabet is inadequate to express the sounds of Modern English. Old English and Middle English were much more phonetic in representing sounds.

Some changes have been made in the alphabet since the Old English period. During the Middle English period the Old English symbols *æ, þ,* and *ð* were lost, and the symbols *j, z, q,* and *v* were added, owing to French influence. Finally, in the 17th century *u* and *v* were separated—*u* for vowel use and *v* for consonant use.

Certain changes in spellings of symbols took place in the Middle English period. The symbols *þ* and *ð* came to be spelled *th,* and the

digraph *æ* became *a*. Also Old English *ū*, reflecting the French orthographical conventions, came to be spelled *ou* or *ow*. As a result, Old English *þū* became Middle English *thou*, and Old English *fæder* became Middle English *fader*.

With the introduction of printing many Middle English spellings became well established as visual representations of words. Thus there gradually emerged a generally accepted system of spelling, which has continued to the present with a few slight modifications. Since a revolution in English pronunciation was taking place at the time the spelling was being standardized, the present orthography does not indicate the phonology very well. Nevertheless, the written word has had a strong unifying effect on the language. Today the principal forms of Modern English (British, American, and Commonwealth) are practically the same on the printed page, thereby providing linguistic and cultural unity despite the almost endless variations in spoken English.

It is therefore not likely that a significant change will occur in the present written English alphabet for the sake of making it phonemic. If a phonemic alphabet were adopted, all literary masterpieces and other writings would have to be translated into the new system, or readers would have to learn the old spellings as well as the new. Then would come the problem of what pronunciation system to use. In addition, the present spelling often indicates the etymology of the word. Thus the quandary of English spelling remains unsolved. There seems to be a tendency toward greater tolerance of misspellings than formerly, but the standardizing effect of the printed page seems certain to prevent absolute individuality in orthography.

THE FUTURE OF ENGLISH

If World Wars I and II and the vigorous participation of English-speaking nations in international commerce carried English [illegible] as they did, the nature of the language itself helped make it virtually a second tongue to millions of users of other languages. Among features of English favoring its widespread use are its sentence structure, based on a simple word order instead of complicated inflections, and its "natural" gender, instead of the "grammatical" gender system of some other leading languages.

English is almost overwhelming in the richness of its vocabulary, estimated to contain more than a million words and to be the world's largest. From this vast storehouse, users of the language can coin words to suit their needs or give new meanings to existing words in ways that seem natural and effortless. Many other features lend force and flexibility to the language. Among them is the fact that an action verb can be linked with a variety of prepositions to convey both literal and figurative meanings, as in combining *put* with *across, away, down, on, over,* and *through*. Another is the ease with which a word can be made to function as more than one part of speech. For example, many nouns may be used as verbs in popular speech, and vice versa, as *table, chair, seat, curtain,* and *shop*. No other Indo-European language can approach English in this freedom of conversion.

Examples of the flexibility of English are not nullified by its unphonetic and often irrational spelling. And even here a defense of sorts can be made. Users of other languages sometimes get a clue to the meaning of a word written in English because in that form it is similar to a word in their own languages, even though the English pronunciation may fall strangely on their ears.

Whatever the future may hold for English, it has proved to be eminently suitable for almost all forms of written expression as well as for everyday use. It is sure to develop and change, for such is the nature of a living language. Probably it will become increasingly informal and utilitarian, under the impact of mass education and the mass media. Thus the written and the spoken forms of the language will be drawn closer together, making for greater flexibility. In the view of some, English might in time become the one generally accepted international language, although national political rivalries and the reluctance of speakers of other major tongues to yield primacy to English are formidable barriers.

Languages of the World

The number of languages spoken in the world may be estimated at about 8,000. No definite figure can be given for two reasons: the incompleteness of our knowledge of human speech varieties and the definitional vagueness of the term. Languages "shall be distinguished from dialect. In popular usage a language is superior in dignity to a dialect in that a language has a written orthography, grammatical, and lexical norm; characteristically serves as a medium of literary expression and educational instruction; and often has official status as a national language or as a local embodies the aspirations of its speakers for political recognition. Other forms of nontechnical usage are labeled "dialects" and are often popularly believed to be mere corrupted forms of standard languages.

In technical usage, however, both written standard languages and dialects, which are infrequently or never written, are equally dialects of the same overall language, providing mutual intelligibility exists. Thus standard French and the local patois of, say, Gascony are equally variants of a single French language, assuming mutual intelligibility. Indeed, standard languages arise from the modification of some particular local dialect variant that has acquired priority for a variety of nonlinguistic reasons, usually some combination of cultural, economic, and political factors. Unfortunately, rigorous application of the criterion of mutual intelligibility has not proven to be possible because of variable factors that enter into its determination—relative intelligence, breadth of linguistic experience, and even emotional attitude.

The great existing variety of languages has arisen through the local differentiation of previously uniform means of communication. As local dialect variants diverge in the course of time, what were formerly dialect variations of the same language develop their differences to the point of mutual unintelligibility and become separate languages. Thus the local variants of Latin spoken in different sections of the Roman Empire moved farther and farther apart, to the point where they became a number of distinct standard languages, including Spanish, Portuguese, French, Italian, and Romanian, and many more distinct local dialects. Such languages are said to be genetically related. Along with this diversification, however, is a countermovement toward language unification, as some forms become extinct and, in particular, as standard forms with their greater prestige, replace local unwritten dialects.

In a few instances new languages arise not from the local differentiation of a previously uniform language but from an auxiliary form of speech known as *pidgin*. A pidgin is based always on some existing language from which its vocabulary is predominantly drawn but usually with a highly simplified grammatical structure. Pidgins are, by definition, auxiliary modes of communication employed among people of diverse linguistic background. They are not native languages of anyone and tend to be restricted in their powers of expression because of their limited use. However, in a few cases, a pidgin has acquired the role of first language of a population and thereafter has been transmitted in the normal fashion. Such language is called a creole. An example is Haitian creole, originally a pidginized form of French used among themselves by African slaves of differing first languages and with their masters. This is now the regular speech of the population of Haiti and has developed along normal linguistic lines.

In modern times a number of artificial languages have been devised as international auxiliary languages. Even the most successful of these, such as Esperanto, have had only limited use. There is no reason to believe that any existing language has originated from such an artificial language.

MODES OF LINGUISTIC CLASSIFICATION

Language may be classified from a number of viewpoints and for various purposes. One basic kind of classification is typological, and another is genetic.

Typological Classification. Unlike genetic classifications, which reflect the historical fact of the differentiation in the course of time of an original homogeneous speech community, a typological classification has no necessary historical implications. To take one instance of a typological classification, all languages may be divided between those that are tonal and those that are nontonal. In tonal languages, a difference in pitch in an otherwise identical syllable may provide a drastic change of meaning. Such differences, therefore, function as do distinctions among the ordinary phonemes in a nontonal language. Thus in Yoruba, a tonal language of West Africa, *ko* on a high pitch means "to learn"; on a middle pitch, "to write"; and on a low pitch, "to refuse."

Membership in the group of tonal languages has no necessary historical implications. There are tonal languages in Africa, Southeast Asia, aboriginal Mexico, and elsewhere, and all the indications point to the fact that tonalism arose independently in the different areas. Indeed, languages that originally had a tonal system may lose it; those lacking one may develop it.

Typologies are generally either phonological, as the division into tonal and nontonal languages, or grammatical. An example of grammatical typology is a classification of language according to the presence or absence of noun gender. Similar gender systems, for example, the sex gender systems of Latin (masculine, feminine, neuter) recur independently in other areas, as with certain native American languages, such as Chinook (masculine, feminine, neuter).

A popular grammatical typology has been one that divides the languages of the world into isolating, agglutinative, and inflective types. Its basic criteria pertain to internal word structures. At one end are languages in which each word is an unchangeable and unanalyzable unit—that is, not divisible into such characterizing features as root or inflection. Having no internal means of indicating grammatical connections with other words in the sentence, word order becomes the method of indicating relationships. Languages using this method, called *isolating*, form an ideal type to which no known language actually conforms, although some approximate it—for example, Vietnamese in Southeast Asia. The opposite to isolating languages in this typological scheme are languages in which the word is analyzable into a number of highly fused individual elements expressing a variety of syntactic functions. Such languages are called *inflective*. The classical languages (ancient Greek and Latin and Sanskrit) are considered models of this type. Between these extremes is the *agglutinative* type, in which, while the words have internal structures, the individual parts are clearly distinguishable, so that they may be considered agglutinated (literally, glued together) in a mechanical fashion.

In the 19th century this typological classification was widely interpreted as a developmental scheme. The isolating type was regarded as the most primitive, the agglutinative as more advanced, and the inflective as the most highly developed. This scheme was clearly ethnocentric in that the most advanced inflectional type was believed to have been attained only in the Indo-European and Semitic families. A discrepancy in the scheme was immediately obvious because the most frequently cited example of the isolating, apparently the most primitive type, was

Chinese, hardly the language of a primitive people. Moreover, as reliable knowledge concerning the grammatical structure of American Indian languages began to accumulate, it became apparent that many of these had complex grammatical structures. This fact was explained away by contending that these languages were overelaborated and lacked true inflectional structure. Such languages were called *polysynthetic*.

Implicit in this interpretation was a scale analogous to that of the isolating-agglutinative-inflective typology—namely, a scale based on the complexity of word structure, running from analytic, through synthetic, to polysynthetic. In *Language* (1921), the American anthropologist Edward Sapir sought to put this by-then obsolescent classification on a new, objective basis, freed from any developmental connotations. The new classification was necessarily more complex because notions that merged and were confused in the traditional classification had to be disengaged and separated. Thus, for example, Sapir proposed a distinct scale of synthesis based on the gross complexity of the word. He also distinguished two different senses of inflection. One had to do with the degree of irregularity of the morphological systems. Such irregularity, which led to difficulty in assigning a clear boundary between stem and inflection, he renamed *fusion*, opposing it to agglutination. The other, distinguished from fusion, had to do with inflection proper, in the sense of the existence of affixes expressing grammatical relations. The direct opposite of inflection is the isolating technique by which word order rather than affixes fulfills the function of expressing grammatical relations.

Although it is now generally agreed that historical and developmental conclusions cannot legitimately be derived from typologies, they prove to have uses for other purposes. Such uses of typologies will be considered later.

Genetic Classification. In genetic classification languages are divided into groups of which each contains only languages that are believed on direct or indirect evidence to have originated as diverging forms of what was once the same language. In such a classification there is a direct and obvious reference to real historical events, in that languages that are classified together have developed in the course of time from a single ancestral language. This ancestral language, for which the prefix "proto" frequently is employed, must, of course, once have developed as a dialect of some still earlier language. For example, the various Germanic languages—English, Dutch, German, Swedish, Norwegian, Danish, and Gothic—show similarities of a sort that lead us to posit a single ancestral language, Proto-Germanic. Proto-Germanic itself, however, shows resemblances to a series of reconstructed languages or to languages attested from an older period in written documents. From these resemblances we conclude that Proto-Germanic, Proto-Slavic, Proto-Italic, Proto-Celtic, and others originated from distinct dialects of a still earlier language, Proto-Indo-

An overall genetic classification takes a form analogous to a genealogical tree, and, indeed, the subfamilies of a larger family often are called branches. Of course languages, whether related or

vocabulary and to influences on grammatical structure and sound

common descent from

French word "deux" [dú]

emblances result from much later borrowings

English forms is reconstructed as **dwō* on a variety of evidence. (Such reconstructed forms usually are preceded by an asterisk.)

The resemblances relevant for genetic classification involve, then, both sound and meaning in conjunction, occurring in etymologically connected cognates. These may be either in root vocabulary or in grammatical elements. The existence of pairs, such as English "sun" and German "Sonne," English "hand" and German "Hand," and English "foot" and German "Fuss," are relevant vocabulary evidence in relationship. Likewise, the German comparative and superlative adjective endings, *-er* and *-est*, identical to the English forms, and the English past-tense ending, *-ed*, similar to the German *-et*, constitute important grammatical evidence.

The distinction between genetic classification criteria, involving sound and meaning, and those for typological classification is apparent. Typological criteria deal with sound in isolation from meaning (phonological typologies) or meaning in isolation from sound (grammatical and semantic typologies). Thus in the typological classification into tonal and nontonal languages cited earlier the specific meanings of the forms containing particular sounds are disregarded. In like manner a grammatical typology based on noun gender classes places Arabic, with masculine and feminine genders, in the same type as French, which also has masculine and feminine genders, and treats the specific sounds of the affixes that express the genders as irrelevant.

Uses of Genetic and Typological Classifications. Since a genetic classification has direct historical meaning, its usefulness as a historical source is obvious. For example, for the unity of the Romance languages, which form a genetic group, there is the corresponding historical fact of the Roman Empire. Further, a comparison of related languages leads, under favorable circumstances, to the reconstruction with considerable detail of many features of the ancestral language. Such reconstruction of linguistic history by the methods of comparative linguistics is a highly developed subdiscipline of linguistics. The study of Indo-European is the classic example of using comparative linguistics, but its use is by no means confined to that family or even to those with written evidence of the linguistic past. Examples of reconstructions of other families are those for Proto-Bantu in Africa, Proto-Austronesian in Oceania, and Proto-Central-Algonkian in North America.

The work of reconstruction is greatly facilitated by the fact that sound changes in language are normally regular. A specific sound in a particular phonetic environment almost always undergoes the same change in different words. Thus in true cognates between English and German there is a regular correspondence between English *t* and German *ts* (orthographically *z*)—for example, English "two" and German "zwei," English "tell" and German "zählen," and English "ten" and German "zehn." This correspondence arises because of the regular German sound change from an earlier *t* in word-initial, while English maintains the original sound in this position. There almost always are a few exceptions, but these are generally attributed to other factors of change.

Genetic classification leads to the reconstruction of linguistic history, and this in turn provides valuable clues to nonlinguistic theory. For example, the present distribution of related languages furnishes probable hypotheses about the past movements of peoples. Thus the presence of an Austronesian language in Madagascar, off the coast of Africa, whose nearest linguistic relative is in Borneo, provides indisputable evidence of a migration from the Indonesian area to Madagascar. Also, the reconstructed vocabulary of the proto language leads to inferences regarding the natural environment, family organization, basic economy and religious concepts of the original community. Because in most cases it is possible to distinguish inherited from borrowed words, we often derive valuable historical information concerning cultural diffusion between one people and another.

Typological classification, which does not provide specific historical inferences, leads to general conclusions about the psycho-

logical nature of human speech behavior. For example, the absence or relative rarity of instances of certain logically possible types enables us to generalize about human behavior in the area of language. In a typology of word order based on the normal arrangement of noun subject (S), verb (V), and noun object (O) in declarative sentences, there are six logically possible orders: VSO, SVO, SOV, VOS, OVS and OSV. Of these, the first three are common, while the last three are rare or nonexistent. The corresponding feature of the occurrent types is the placement of the nominal subject before the nominal object. In such instances, typological classification has led to general conclusions about human speech that must be taken into account in any general theory of human behavior.

GENETIC CLASSIFICATIONS

Languages of Europe, the Middle East, and Related Areas. The largest language family of Europe and the Middle East is Indo-European. The European colonization of the Western Hemisphere and other parts of the world after the 1500's by speakers of Indo-European languages resulted in their dominance in extensive areas outside Europe. The unity of Indo-European first was recognized by the British Orientalist Sir William Jones in 1786, and beginning with the pioneer work of the Germans Franz Bopp and Jacob Grimm and the Dane Rasmus Rask in the early part of the 19th century, the comparative study of Indo-European languages has progressed further than that of any other language family.

The Indo-European family falls into a number of distinct, well-marked branches: Celtic, Germanic, Italic, Balto-Slavic, Albanian, Greek, Armenian, Indo-Iranian, Tocharian, and Anatolian. The westernmost is Celtic, which once was spoken over an extensive area of western Europe. The extinct Celtic language of the ancient Gauls is known to some extent from inscriptions and materials recorded by the Romans. Celtic languages are divided into two groups: Gaelic, including Irish, Manx (the language of the Isle of Man), and Scottish, and Brythonic, including Welsh, Breton, and the extinct Cornish and Pictish. Breton is not a remnant of ancient Gaulish, but was taken to northwestern France from Britain, with Old Breton dating from the 9th to the 11th century.

The Germanic subfamily of Indo-European is divided into the extinct Gothic recorded in the Bible translation of Ulfilas and the existing West Germanic languages. These consist of three groups: Anglo-Frisian (English and Frisian), Scandinavian (Norwegian, Swedish, Danish, and Icelandic), and German-Dutch. The German-Dutch branch contains two dialect areas, High German in the south and Low German in the north. The German literary language for the Flemish inhabitants of Belgium, as well as for the Netherlands, is a form of Low German. Yiddish developed from the High German dialect spoken by German Jews. Dutch as spoken in South Africa changed along distinctive lines, giving rise to a new literary language, Afrikaans.

The Italic branch of the Indo-European is at present represented only by the Romance languages. In ancient times, Latin was but one of a number of languages of the Italic group, spoken chiefly in Italy. Of the others, the best documented are Oscan, the language of southern Italy, and Umbrian.

The modern standard languages of the Romance group include Portuguese, Spanish, Catalan (Spain), Provençal (France), French, Italian, Rhaeto-Romanic or Romansh (Switzerland), and Romanian. Spanish today is the dominant language of Latin America except Brazil, where Portuguese is the official language. French has bilingual status in Canada, and creolized forms of French are current in Haiti and other West Indian Islands, in French Guiana, and on the island of Mauritius.

Eastern Europe is dominated linguistically by the Slavic branch of Indo-European. The Slavic branch may be divided into three main groups of literary languages: eastern, with Russian, White Russian, and Ukrainian; western, with Polish, Czech, and Slovak, and southern with Slovene, Serbo-Croatian, Bulgarian, and Macedonian. An archaic form of Slavic, still used in the liturgy of the Orthodox church, is called Old Church Slavonic. It is probably ancestral to present-day Bulgarian and therefore is sometimes called Old Bulgarian. The smaller Baltic branch comprises Lithuanian and Lettish.

In the Balkans, Greek and Albanian form distinct branches of Indo-European. With regard to Greek, except for the local dialect of Sparta, which is a continuation of the ancient Doric of the area, modern Greek developed from the *koinē*, or common language, of the Hellenistic period. The *koinē* was based on the Attic of Athens. In ancient Greece a variety of dialects existed, most commonly divided into three main groups: Ionic, Doric, and Aeolic. It now is known that the language of the Linear B Cretan inscriptions was an early dialect of Greek.

Indo-European languages also are spoken in southwestern Asia. Here are two branches: Armenian, spoken mostly in the Armenian republic of the USSR, and Indo-Iranian. Indo-Iranian in the ancient period was represented by Avestan, the Iranian language of the sacred writings of the Zoroastrians; Old Persian, the language of the inscriptions of the Achaemenid kings; and Sanskrit, the language of the sacred texts of the Hindu religion as well as of a considerable secular literature. A later stage of Old Persian is represented by the Pahlavi (Pehlavi) of the early Middle Ages, which developed into the modern Persian literary language. In addition to Persian, the modern Iranian languages include Pashto, the chief language of the Afghanistan, and Baluchi, Kurdish, and Tajik. The later forms of the Indic branch, as spoken after the period of Sanskrit, are called Prakrits. One of these, Pali, is the language of the extensive Buddhist canon. A number of important literary languages, spoken chiefly in the northern part of India, are the modern representatives of the Indic subbranch of Indo-Iranian. Among these are Hindi, the present official language of India; Gujarati, Sindhi, Panjabi, Kashmiri, Marathi, Bengali, Assamese, Oriya, and Nepali. In Sri Lanka (Ceylon), Sinhalese, an Indic language geographically separated from its northern congeners, is the chief language.

One of the extinct branches of Indo-European is Tocharian, consisting of two closely related languages (A and B) of central Asia, known from Buddhist written documents of the early Middle Ages. A number of extinct languages of Asia Minor form the Anatolian group of languages. These are chiefly known from the cuneiform records excavated at Bogazköy in Turkey. The best known is cuneiform Hittite, with written documents as early as 1600 B.C. Some scholars consider Anatolian a branch of Indo-European, while others believe the relationship to be a more distant one and reckon Indo-Europeans and Hittite as the two branches of a single family, which they call Indo-Hittite.

Among the non–Indo-European languages of Europe are Basque of northern Spain and adjoining southern France and ancient Etruscan of Italy. Basque has most often been connected with the Caucasian family of languages, but this relationship has not been generally accepted.

Afroasiatic, traditionally known as Hamito-Semitic, is the chief language family of the Middle East and the northern part of Africa. It consists of five branches: Semitic, Egyptian, Berber, Cushitic, and Chadic. Of these, Semitic and Egyptian are known from written records of considerable antiquity. Semitic usually is divided into eastern and western branches. The only known member of the eastern branch is the extinct Akkadian language, of which there is a vast literature in the cuneiform system of writing. Akkadian had two chief dialect variants: northern, or Assyrian, and southern, or Babylonian.

The western branch of Semitic has two divisions, Northwest Semitic and Southwest Semitic. The Northwest subfamily includes Aramaic and Canaanite. Aramaic was once the lingua franca of a vast area in the Middle East, from the Persian Achaemenid period on. It was the language of Palestine at the time of Jesus and was employed by the Jews alongside Hebrew in the literature of the talmudic period. In the form of Syriac it still remains the liturgical

language of certain Middle Eastern Christian churches. Today, Aramaic survives as a spoken language only in a few scattered areas, having been superseded by Arabic. The Canaanite branch of Northwest Semitic included, in ancient times, Phoenician, Moabite, Hebrew, and other languages. After becoming extinct as a spoken language before the Christian era, Hebrew has been revived and is the official language of Israel. Ugaritic, the language of inscriptions from Ras Shamra in Syria, dating from the 2d millennium B.C., should be considered an early form of Canaanite.

Southwest Semitic is divided into North Arabic and South Arabic-Ethiopic. North Arabic includes the colloquial Arabic dialects that extend from Morocco to Iraq, as well as literary Arabic. South Arabic is represented by the languages of South Arabian inscriptions: Sabean, Minean, Himyaritic, and Qatabanian. South Arabic languages still are spoken by certain populations in South Arabia (Mehr, Hadhramaut) and on the island of Socotra. Among Ethiopian Semitic languages, classical Ethiopic (Geez) still is in use as a liturgical and literary language. It belongs to the northern group, which is represented among contemporary languages by Tigre and Tigrinya. The southern Ethiopic Semitic group has as its chief member Amharic, the official language of Ethiopia. It also includes the Gurage group, Argobba, and Harari.

The second branch of Afroasiatic is the extinct ancient Egyptian. This language is known in its earliest form from hieroglyphic inscriptions. The later form of the language, Coptic, written in an alphabet derived from Greek, was spoken into the 17th century and still is used in the liturgy of the Coptic Church.

The Berber languages are the third group within Afroasiatic. They are spoken alongside Arabic in much of North Africa. The Tuareg of the Sahara also speak a Berber language.

Cushitic, the fourth group of Afroasiatic languages, consists of a large number of languages spoken in Ethiopia, Somalia, and even as far south as mainland Tanzania. The most important are Somali and Gallinya, the latter a major language of Ethiopia.

The fifth group of Afroasiatic languages, Chadic, is represented by a large number of languages in the vicinity of Lake Chad in black Africa. Of these, the most important is Hausa, which had official status in northern Nigeria and is widely employed as a lingua franca.

Some extinct languages of the Middle East and Africa are not affiliated with the major families just described. It is possible, in some cases, that an increase in the available material will assist in their ultimate assignment to some major group. Such languages include Sumerian, Elamite, Hurrian, and Meroitic.

Languages of Subsaharan Africa. The non-Afroasiatic languages of Africa may be classified into three linguistic groups: Niger-Kordofanian, Nilo-Saharan, and Khoisan. The first, Niger-Kordofanian, consists of Niger-Congo, the most extensive linguistic grouping in Subsaharan Africa, and the small Kordofanian stock of Sudan. Niger-Congo occupies almost all of West, Central, and East Africa. It tentatively may be divided into six major subgroups. The first, and most westerly, is the West Atlantic subgroup, including, among others, Wolof of Senegal, Temne of Sierra Leone, and the widespread Fulani spoken in a number of separate regions from Senegal to Lake Chad and beyond. The second subgroup is Mande, including Vai of Liberia, for which an indigenous syllabary was invented; Mende of Liberia; and Malinke and Bambara of Mali. The extensive Voltaic, or Gur, the third subgroup, is spoken largely in the basin of the Volta River system. Its largest single member is Mossi of Upper Volta. The fourth subgroup is Kwa, extending in general along the coastal belt of West Africa from Liberia to Nigeria. Among the major languages of Kwa are Twi of Ghana, Ewe of Ghana, Togo, and Dahomey;

[illegible] includes a number of lan-

300 languages covering most of the Congo basin and eastern and southern Africa. Among the important Bantu languages are Kikongo, Zulu, Chwana, Nyanja, Luganda, and Swahili. Swahili, originally spoken by an Islamicized black population of the Tanganyika-Kenya coast and on Zanzibar and Pemba, has become the most widely spoken lingua franca of East Africa and is the official language of Tanzania. It is quite probable that Bantu-Congo and Kwa really form a single subgroup. The sixth subgroup of Niger-Congo is Adamawa-Eastern, which extends north of the Congo basin eastward into Sudan. Among the important languages are Zande and Sango, the latter being the chief language of the Central African Republic.

The other large linguistic stock of black Africa is Nilo-Saharan. It includes, in West Africa, Songhai, the language of the great medieval Songhai Empire, and the Kanuri-Teda group. Kanuri was the chief language of the former Muslim kingdom of Bornu in the Lake Chad area. Teda is spoken in the eastern Sahara. However, most of the languages in the Nilo-Saharan family are found in the eastern portion of the continent. Among these are Nubian, spoken in the Nile Valley, and the large Nilotic group, which includes Shilluk, Nuer, Acholi, Masai, Bari, and Nandi. Some Christian religious documents in Nubian from the medieval period were written in a modified form of the Coptic alphabet.

The third linguistic family of Subsaharan Africa is Khoisan, which is unique in the world because of its use of click sounds. Except for the Negroid Bergdama, Khoisan languages are spoken mostly by the racially distinct Khoikoin (Hottentots) and San (bushmen). Other exceptions are a few neighboring Bantu groups that have borrowed the click sounds. Two languages of the family, Sandawe and Hatsa, are found in mainland Tanzania (Tanganyika), much farther north than the main body of speakers.

Languages of Southeast Asia and Oceania. Five major language stocks occupy practically all of southern and eastern Asia and Oceania: Dravidian, Sino-Tibetan, Austroasiatic, Thai-Austronesian, and Indo-Pacific. The Dravidian languages are a group of quite closely related languages, which, except for the detached Brahui of Baluchistan, are spoken entirely in the southern portion of the Indian subcontinent and on the island of Sri Lanka (Ceylon). The Dravidian group includes four literary languages—Tamil, Malayalam, Kanarese, and Telugu—as well as a number of others, such as Ghond and Kui, that have not undergone such cultivation.

The Sino-Tibetan family is of vast extent and great internal diversity. The Sinitic branch includes literary Chinese as well as the numerous local variants of Chinese, of which Mandarin is the most important. The other large branch is Tibeto-Burman, which includes the Tibetan group, the Naga languages of Assam, the Kuki-Chin of northern Burma, Burmese proper, and the Karen languages.

Austroasiatic is the third major language group of Southeast Asia. It may be divided into the following subfamilies: (1) the aboriginal Munda languages of central and eastern India; (2) Mon-Khmer, with Mon spoken in southern Burma, and Khmer in Kampuchea (Cambodia), of which it is the official language; (3) Palaung-Wa, spoken in Burma; (4) Semang-Sakai, spoken in southern Burma and in Malaysia; (5) Khasi, spoken in the Assam hills of India; (6) Nicobarese, spoken in the Nicobar islands; and (7) Annamite-Muong, a group of languages of which the most important is Vietnamese (Annamite).

Thai-Austronesian has two branches: Thai-Kadai and Austronesian. Thai-Kadai consists of the Thai group, long erroneously included in Sino-Tibetan, and the Kadai languages, spoken in southwestern China and in the interior of the island of Hainan off the southeast coast of Asia. Thai-Kadai is related to the large Austronesian family, sometimes called Malayo-Polynesian. The Austronesian languages extend from Madagascar off the southeast coast of Africa to Easter Island, the farthest east of the Polynesian Islands. Austronesian languages are found in Madagascar, the mainland of Southeast Asia, Taiwan, the Philippines, Indonesia,

Melanesia, Micronesia, and Polynesia. Among the important Austronesian languages are Malay, widely used as a trade language and, in modified form (Bahasa Indonesia), the official language of Indonesia; Tagalog in the Philippines; Batak in Sumatra; Javanese; Samoan; Fijian; and Hawaiian.

The thesis of the German ethnologist Wilhelm Schmidt, linking the Austronesian languages with Austroasiatic in a larger Austric unity, is probably valid. It requires restatement, however, on the basis of the later linkage of Thai-Kadai with Austronesian, to include Thai-Austronesian and Austroasiatic. The Miao-Yao group of southwestern China is also affiliated with Austric.

It has been customary to apply the term Papuan to all non-Austronesian languages of the Pacific area except Australia and Tasmania. Such languages are spoken over most of New Guinea and in various parts of eastern Indonesia and in Melanesia. It appears highly probable that all of these non-Austronesian languages except those of Australia and the hitherto unclassified languages of the Andaman Islands in the Bay of Bengal are to be linked in a single Indo-Pacific family. Indo-Pacific may be divided into the following subgroups: (1) Andaman; (2) Northern Halmahera; (3) Timor-Alor; (4) Vogelkop-Kamoro (New Guinea); (5) Ekari-Moni (New Guinea); (6) Hollandia (New Guinea); (7) Merauke (New Guinea); (8) Kiwai (New Guinea); (9) Highland (New Guinea); (10) Astrolabe Bay (New Guinea); (11) Kate (New Guinea); (12) Eastern New Guinea; (13) Northern Solomons (Russell, Rendova, Vella la Vella, and Savo); (14) New Britain; (15) Bougainville; and (16) Tasmania.

The languages of the Australian aborigines form a single linguistic group. One subgroup, Pama-Nyungan, covers most of the continent, but approximately 30 others are concentrated chiefly in the northwest, with some in north central Australia.

Languages of Central and Northern Eurasia. In addition to Basque, other non—Indo-European languages are spoken in Europe. These are branches of the Uralic family, which is composed of the Samoyed languages spoken in Siberia and the more important Finno-Ugric group. The Finnic languages include Finnish, Estonian, Lapp, the Permian languages (Zyryan and Votyak) of northern European Russia, and the more distantly related Mordvin and Cheremiss of the Middle Volga region. The Ugric languages include Hungarian and Ob-Ugric (Vogul and Ostyak) of western Siberia.

A second major linguistic family of northern Eurasia is Altaic, consisting of Turkic, Mongolian, and Tungusic. The Turkic subfamily, which has not yet been properly subclassified, includes Osmanli Turkish, the standard language of Turkey; Azerbaijani, the chief language of Azerbaijan; Nogai in the Caucasus; Chuvash in the Middle Volga; Turkuman, Kirghiz, Kazak, Karakalpak, and Uzbek, all major languages of Russian central Asia; Uigur of Chinese Turkestan; and Yakut, used far to the northeast in Siberia. Mongolian is spoken in several varieties, chiefly Khalkha in Outer Mongolia and Buryat in Inner Mongolia. Languages of the Tungusic branch of Altaic are spoken over a vast but sparsely settled area in eastern Siberia and south of the Amur River. The only form of Tungusic that has received literary cultivation is Manchu. A third major family of languages of this general area is Caucasian, consisting of two distinct groups, South Caucasian or Khartvelian, of which the main language is Georgian, and North Caucasian, consisting of an eastern (Daghestan) group and a western (Circassian and Ubykh) group.

Outside of these larger groupings are the following individual languages or small-scale groups: Burushaski, an isolated language of Kashmir; the Yenisseian group, now extinct; Yukaghir, spoken in eastern Siberia; Gilyak, spoken both in the Amur region on the mainland of Asia and on Sakhalin; the Luorwetlan, or Paleosiberian, group (Chukchee, Koryak, and the various Kamchadal dialects of Kamchatka); Ainu, the language of the aborigines of Hokkaido and southern Sakhalin; Korean; and Japanese (Japanese proper and the language of the Ryukyu Islands). An Asiatic dialect of Eskimo is spoken at the northwestern tip of Siberia.

The Eurasiatic stocks that have been discussed are all conventionally considered to be independent, but various hypotheses have been advanced linking one or more of these. Thus as early as 1730, Count Philip J. von Strahlenberg of Sweden proposed the Ural-Altaic hypothesis of linkage, which was generally accepted in the 19th century, went out of fashion in the early 20th century, but is being revived. Among other later proposals are those linking Yukaghir and Uralic; Korean and Altaic; Korean, Ainu, and Japanese; and Uralic and Eskimo-Aleut. In fact, it seems highly likely that the following groups form a single large family that might be called Eurasiatic: Uralic, Altaic, Yukaghir, Paleosiberian, Gilyak, Ainu, Korean, Japanese and Eskimo-Aleut. It is also probable that they are related to the Indo-European. In fact, the notion of an Indo-European relationship with Uralic has received fairly wide acceptance.

Aboriginal Languages of the Western Hemisphere. Much research remains to be done in the classification of the numerous and diverse languages spoken by the aboriginal inhabitants of the Western Hemisphere. Among the questions involved is that of their ultimate unity and of possible links to languages of the Eastern Hemisphere. The Amerind languages may, for convenience, be divided into those of North America north of Mexico, those of Mexico and Central America, and those of South America. This division is based, not on linguistic criteria, but on the relatively distinct history of classificational attempts and the fact that specialists have tended to confine themselves to one of these three areas.

The first overall classification of languages north of Mexico was that of Major John W. Powell of the Bureau of American Ethnology, who in 1891 divided these languages into 55 independent stocks. This extremely conservative classification became the basis for more extensive hypotheses in the first decades of the 20th century, notably by the American anthropologists Alfred Kroeber and Roland Dixon. These results were restated and further reductions proposed in an influential article by Edward Sapir, published in the *Encyclopaedia Britannica* in 1929. Sapir's classification of all American Indian languages north of Mexico into six families became the basis of all subsequent work and gave rise to a considerable literature of controversy. It is becoming clear that some of Sapir's families are substantially correct, while others are in serious need of revision, leading to a somewhat different overall view of language classification in the northern part of the Americas.

Sapir's first family is Eskimo-Aleut. The Eskimo branch falls into two well-marked dialect groups, a western in Alaska and Siberia (Yupik) and an eastern covering the remainder of the vast Eskimo domain. The dialects of the Aleutian Islands form the other branch of Eskimo-Aleut. As indicated earlier, the relationships of Eskimo-Aleut are in all probability to be sought in the west in the large Eurasiatic group of languages.

The second family in Sapir's classification is Algonkian-Mosan, consisting of three branches: (1) Algonkian-Ritwan; (2) Mosan; and (3) Kutenai. The large Algonkian group covered most of the central and northeastern United States and eastern Canada and can be divided into four subgroups: (1) Eastern (including Mohican, Delaware, and Abenaki) and Central (including Fox, Sauk, Menomini, Ojibwa, and Cree); (2) Arapaho; (3) Cheyenne; and (4) Blackfoot. The Ritwan Languages are Wiyot and Yurok in northern California. The Mosan family consists of the Salishan, Chemakuan (Chemakum and Quileute), and Wakashan (Kwakiutl and Nootka) subfamilies, all spoken in the northwestern United States and southwestern Canada. The third branch is formed by the Kutenai language of the same general region as the Mosan.

The third family is Na-Dene, consisting of (1) Haida; (2a) Tlingit; and (2b) Eyak-Athapaskan. Athapaskan is an extensive group spoken as far north as Alaska and as far south as the Navajo and Apache of the American southwest.

The fourth Sapir family is Penutian, extending from the Tsimshian of British Columbia to the Maya of Mexico and Guatemala. It includes (1) California Penutian (Yokuts, Maidu, Wintun, and

Miwok); (2) Oregon Penutian (Takelma, Coos, and others); (3) Plateau Penutian (including Sahaptin and Klamath); (4) Chinook; (5) Tsimshian; (6) Mexican Penutian (consisting of Sapir's Mixe-Zoque and Huave, to which should be added Mayan and Totonac).

Sapir's fifth family, Hokan-Siouan, probably has aroused the greatest controversy and is surely not valid in the form he presented. Sapir divided Hokan-Siouan into six groups. The first is Hokan-Coahuiltecan, including Hokan, Subtiaba-Tlappanec, and Coahuiltecan. Individual Hokan languages include, mostly in California, Yana, Pomo, Karok, Chimariko, Shasta-Achomawi, Washo, Esselen, Yuman, Chumash, Seri, and Chontal. To these, Jicaque in Honduras and Subtiaba in Nicaragua should be added. The Coahuiltecan group contains various extinct languages of Texas and Mexico. The other five groups are Yuki, Keres (spoken in certain Pueblos), Tunican (Louisiana and Arkansas), Iroquois-Caddoan, and Eastern (Siouan-Yuchi, Natchez-Muskogean, and possibly the extinct Timucua of Florida). It now appears that, except for Hokan-Coahuiltecan, all of these languages should be assigned either to Penutian (Yuki, Tunican, and Natchez-Muskogean) or to a new group, Keres-Siouan, consisting of Iroquoian, Caddoan, Siouan-Yuchi, and Keres.

The sixth family in Sapir's classification is Azteco-Tanoan. It contains two certain branches (Uto-Aztecan and Tanoan-Kiowan) and a third, doubtful one (Zuni). Uto-Aztecan includes the Shoshonean languages of the southwestern United States (for example, Ute, Comanche, and Hopi), Pima-Papago, and the Aztecan group (including Cora, Huichol, and Nahuatl). Tanoan is the language of certain Pueblos (Taos, Picuris, and others).

It is likely that a third branch should be added to Uto-Aztecan and Kiowa-Tanoan, namely Oto-Mangue, to form a major stock, Central Amerind, and that Zuni is part of Penutian. Oto-Mangue, the single major group spoken exclusively in Middle America, includes Otomi, Zapotec, Mixtec, and others.

The southern part of the area between the Rio Grande and South America is almost entirely occupied by northern outliers of the vast Chibchan family, which is concentrated in northwestern South America but has southward extensions as far as Argentina.

For South America, a large number of independent families were posited by John Alden Mason in 1950 and, largely following him, by Norman McQuowan in 1955. In 1965, Joseph Greenberg proposed an overall reduction to three families: (1) Macro-Chibchan; (2) Andean-Equatorial; and (3) Gê-Pano-Carib. Macro-Chibchan consists of Chibchan proper (including Chibcha, Cuna, Rama, Paya, Xinca, and Lenca) and Paezan (including Paez, Choco, Colorado, and Warrau). Andean-Equatorial has two main branches: Andean, which includes Quechua (the language of the Inca Empire), Aymará, Zaparo, Araucanian, Ona, and Yahgan, and Equatorial, including Tupí-Guaraní and Arawakan, as well as many smaller or extinct languages. Tupí served as the lingua geral (trade language) of the Brazilian interior. Guaraní still is spoken alongside Spanish as one of the two major languages of Paraguay. The third major stock of South America is Gê-Pano-Carib. Its main subdivisions are (1) Macro-Gê, including the Gê language of Brazil, as well as Bororo and Caraja; (2) Macro-Panoan, including the Panoan languages spoken largely in Bolivia, and the Guaycuruan languages of the Chaco; and (3) Macro-Carib, which consists chiefly of the large Carib group. The aboriginal inhabitants of the West Indies spoke Arawakan languages (Andean-Equatorial).

From the foregoing survey it can be seen that, outside of Eskimo-Aleut, the American Indian languages can be divided tentatively into nine families. These are Na-Dene, Algonkian-Mosan, Hokan-Coahuiltecan, Keres-Siouan, Penutian, Central Amerind, Macro-Chibchan, Andean-Equatorial, and Gê-Pano-Carib. A relation among all of these except Na-Dene is highly likely. Thus the indigenous languages of the Americas would consist of (1) a large general Amerindian stock; (2) Na-Dene in the extreme northwest; and (3) Eskimo-Aleut, with affiliations in the Eastern Hemisphere.

Although a small number of isolated languages remain unassigned to larger groupings, the indictions are that further work on the problems of language classification may lead to an overall genealogical classification of the languages of the world into a fairly small number of major branches.

Guide to the Use of the Dictionary

1. ENTRY WORDS AND PHRASES

A. The Main Entry

Main entry words and phrases are set in boldface type and indented from the lefthand margin. Main entry words are syllabicated, with boldface center periods between the syllables: **bal·le·ri·na, Bot·swa·na.** Main entry words are not syllabicated, nor are they pronounced, if the form has already been so treated: **barrow** in the sense of "grave mound" follows **bar·row** "wheeled handcart".

Main entry phrases are not syllabicated if each word in the phrase is syllabicated in its own main entry position: **barrel organ.** If any word of a main entry phrase is not entered in its normal alphabetical place, it is syllabicated at the phrasal main entry: **bar mitz·vah.**

Certain main entry phrases are inverted so that the most logical reference word may be consulted at its alphabetical place. These entries are mainly surnames, geographical names, or the names of historical events or periods. Surnames are syllabicated and pronounced, with given names following in Roman (ordinary text type): **An·der·son** (ændərs'n), Carl David. The key or reference word of a geographical or historical main entry phrase is syllabicated, followed by the beginning of the phrase in main-entry boldface: **A·zov, Sea of; Bau·tzen, Battle of.** Such surnames or reference words are not syllabicated and pronounced, however, if they have already been so treated previously: **Buenos Aires, Lake** occurs after the syllabicated and pronounced entry for the city of Buenos Aires.

B. Variant Forms

Spelling variants are given, separated by commas, in the main entries: **adze, adz; As·wan Dam, As·suan Dam.** The first form is regarded as the more common. If the variation represents a difference between American and British spelling conventions, this is noted, with the American form listed first: **balloon tire,** *Br.* **balloon tyre.**

Spelling variants are treated in the same manner when they occur within the definition block itself as a variant of a subentry: **ac·knowl·edg·ment, ac·knowl·edge·ment.**

For other variants reflecting British usage, see *Usage Labels* below.

C. Inflected Forms

The spellings of plurals (when these are not simply formed by the addition of -s or -es), of participial and past tense forms of verbs, and of comparative and superlative forms of adjectives and adverbs are given in a boldface slightly smaller than the main-entry face and identified by abbreviated italicized labels: **bus·by** . . . *pl.* **bus·bies; brakes·man** . . . *pl.* **brakes·men; ar·tic·u·late** . . . *pres. part.* **ar·tic·u·lat·ing** *past* and *past part.* **ar·tic·u·lat·ed; brave** *comp.* **brav·er** *superl.* **brav·est.**

D. Derivatives and Compounds

When a word is formed by the affixing of a derivational suffix or a compounding word to a base form, the derivative or compound may be entered, and when necessary defined, within the definition block for the base form, rather than treated separately as a main entry: **blame·a·ble, blame·less,** and **blame·wor·thy** appear as derivatives within the definition block of the verb **blame; bounc·er** is entered within the definition block of **bounce; af·fix·a·tion** and **af·fix·ture** are entered in the main entry for the verb **af·fix.**

Such subentries are made when the editor judges that the derivative term within the definition block will be both readily and logically located by the reader. If the derivative is of great currency or is otherwise regarded as sufficiently prominent for separate main entry status, it appears in its own alphabetical place: **bot·a·nist** is a main entry and not a subentry under **bot·a·ny.** Occasionally a less common derivative is entered as a sort of variant in the definition block of a more common form: **brach·y·ceph·a·lous** is entered under main entry **brach·y·ce·phal·ic.**

This dictionary does not attempt to enter all possible derivatives. For instance the regular agent nouns in -er and the very numerous nouns formed with -ment are not entered unless the derivative differs in meaning from what is predictable from the use of the suffix. "Bouncer" above is a case where the sense is not predictable from the meaning of "bounce" plus -er.

Pronunciations are given for derivatives and compounds if these are not readily inferrable from the main entry. Even if the pronunciation is not shown, derivatives and compounds are syllabicated and stresses are marked: under **bu·reauc·ra·cy,** the derivative **bu·reau·crat** is pronounced because two of the vowels have altered sounds, but the additional derivatives **bu·reau·crát·ic** and **bu·reau·crát·i·cal·ly** are marked for primary stress only.

E. Run-in Phrasal Entries

The English language is rich in set phrases, especially in idiomatic phrases whose meaning cannot readily be inferred from the meanings of the separate words, and in phrases consisting of verbs plus adverbs or particles, which are used and understood as if they were linguistic units rather than combinations of units. When a word, especially a verb, enters into many of these phrases, they are "run in" under the main entry for the key word. Under **break,** for instance, the dictionary defines **to break a record, to break away, to break down, to break in,** and ten other such phrases, showing variants where they exist: **to break loose** (or **free**). In a related sort of run-in phrasal entry, **the blind** is entered and defined under the main entry **blind.**

2. PRONUNCIATION

The respelling system of this dictionary is based upon the International Phonetic Alphabet, a scientific notation devised by phoneticians for recording every possible speech sound. It therefore will require, for most persons, a little effort of memory to retain and use the symbols. This system will repay such effort, since it is superior in precision and accuracy over any other system based on "natural" spelling, where in English especially one letter or group of letters may have many pronunciations. The complete respelling system and pronunciation guide will be found inside the front and rear covers and opposite the first page of the dictionary. For the user's convenience, a brief version of the respelling system is printed at the bottom of each page.

This dictionary does not attempt the enormous and probably impossible task of transcribing the pronunciation variants of all the American (and British) dialects, but it does show variant pronunciations that occur within the "General American" (something like educated Northern or North Midwestern) patterns taken here as the standard. For example, **bear** is given only the pronunciation including -r, which does not represent the "-r-less" speech of Southern and Northeastern Americans, whereas words like **a•de•nine** and **a•dieu** show pronunciations that might be heard among educated speakers of the adopted standard. The variant given first is not meant to be "preferred to" or "more correct than" those given second or third.

When the pronunciation of a word changes to indicate a change in part of speech, this is indicated by showing the altered pronunciation at the beginning of the appropriate definition:**ab•stract** (æbstrækt) for the adjective and noun senses, and (æbstrækt) for one verb sense and (æbstrækt) for another as the situation requires; differing pronunciations are similarly recorded for the verb, adjective, and [illegible] of ag•gre•gate.

Foreign words, which are especially frequent among the encyclopedic entries, are not always shown as they would be pronounced in the source language, but rather as they would be spoken and recognized by educated American speakers. In practice this means that when a word or name is well "naturalized" in English, it is respelled with a normal English sound (see **Ab•bas**), but when the word still feels foreign, or is new to most American ears, it is given the proper foreign-language pronunciation (see A•bruz•zi e Mo•lise). In the [illegible] of the world a name is often given both an English and a foreign-language pronunciation (see A•ra•gon).

3. DEFINITIONS

The generic-word definitions of this dictionary aim above all to be brief and to be clear. They are designed to be substitutable for the word defined. The encyclopedic "definitions," or descriptions, interspersed with the generic ones aim to give the appropriate information briefly and clearly. The dictionary conforms to the best practices of those dictionaries—more common in American lexicography than in European—that do not puristically rule factual information out of lexicography, but treat word-information and thing-information as equally valid and equally deserving of space in a useful reference work.

The initial words of definitions are not capitalized. If the definition requires more than one sentence, the first word of the subsequent sentence is capitalized in the customary way.

A. The Definition Block

The definitions are organized in three kinds for ready and easy consultation. First, when a word or phrase has one or more senses and only one part of speech, it is written as a single block with the senses introduced by a single italicized part-of-speech label (see the list of abbreviations for these), and the various senses are then separated by double bars (||). See, for example, the entry at **[illegible]**.

Second, when the term has several definitions in several parts of [illegible] bars. See the entry at **bal•loon**.

[illegible] See, for example, the entries at **bal•ance**.

[illegible]

the more specialized or transferred senses follow; under **butch•er,** the noun is defined before the verb, and so on.

B. Examples

The examples in this dictionary are brief and precise, with the aim not merely of showing the term in a possible or random context but also in one where the sense distinction becomes sharper. For instance, the examples under **burn** set the word or phrase in precise contexts where the particular sense is both illustrated and required: *to burn a hole, the pepper burned her throat, the fire is burning brightly, to burn with shame, to burn into one's memory, her burst of energy soon burned out.*

Examples are printed in italics, as here, and their initial words are not capitalized.

C. Cross-references

Cross-references are printed in small capital letters and are preceded by an asterisk or by an abbreviated label in Roman (ordinary text) type.

They are used most commonly to refer the reader to a related word or phrase that supplements or complements the definition at hand: under **ac•count•ant** cross-reference is made to *CERTIFIED PUBLIC ACCOUNTANT and to *CHARTERED ACCOUNTANT; under **ac•ti•nide series** cross-reference is made to *PERIODIC TABLE; under **accrued dividend** the cross-reference is cf. CUMULATED DIVIDEND; under **ac•i•do•sis** it is opp. ALKALOSIS. Such cross-references enrich the semantic field of the term being defined.

Cross-references are also used as a form of quick definition that refers the user from one main entry to another that is synonymous and is judged to be the more current and "normal" term: the main entry **action painting** is defined by the cross-reference *ABSTRACT EXPRESSIONISM.

4. RESTRICTIVE LABELS

Restrictive labels are of several sorts, and all aim to narrow, specify, modify, or otherwise restrict the term and distinguish it from or within current educated standard American English. Labels are printed in italics within parentheses. All labels are simple and self-explanatory, though the user may need to consult the table of abbreviations from time to time.

A. Field Labels

Field labels indicate, often with an abbreviation, the occupational, technical, or other specialized use of the term at hand: one sense under **ac•tion** is labeled *(horol.)*; one sense under **ag•ate** is labeled *(games)*; one sense under **a•pron** is labeled *(theater)*.

B. Usage Labels

Usage labels indicate the relation of the word or phrase to the dictionary's target language, current educated standard American English. Such labels most often either show a regional or geographical peculiarity of the word or phrase, or they indicate how it differs from strict and accurate standard speech: under **a•gree** two verb senses are labeled (Br.). British use; under **al•so•ran** one sense is labeled *(loosely)*; under **an•te** one sense is labeled *(pop.)*; at **belle** the label *(old fash.)* is used, and so on.

5. ETYMOLOGIES

Etymological derivations are shown at the end of the definition block and within square brackets. The names of source languages or language families are usually abbreviated and are printed in Roman type.

When the word or phrase has simply been borrowed from the source language without change of form or meaning, the etymol[illegible] **ab•do•men** the etymology is [L.].

When the English word or phrase differs in form but not in meaning from the source term, only the language of origin and the source form are shown: under **ace** the etymology is [O.F. *as*].

When the word or phrase is an English translation or version of the foreign source, the etymology shows the language of origin, and then the English gloss after the equal sign: under **aard·wolf** the etymology is [Du. = earth wolf].

In the most common case, the language of origin and the cognate form are shown, with the form in italics and the meaning of the form is shown in Roman, following a comma: under **ac·count** the etymology is [O.F. *aconter*, to count].

When the source word appears in a form that does not closely resemble the English word, as often happens in the case of derivatives from Greek or Latin, the basic source (usually an infinitive or a noun in the nominative case) will be supplemented with the immediate source (often a noun in the accusative case): under **a·tro·cious** the etymology is [fr. L. *atrox (atrocis)*, cruel].

When the source term itself is derived from another language, this is shown by the abbreviation "fr.": under **ap·sis** the etymology is [L. < arch fr. Gk]; under **bail·iff** the etymology is [M.E. *bailif, custodian* fr. O.F.].

When the actual source of the word or phrase is not entirely certain, a range of related possible source words may be given: under **ba·bel** the etymology is [Heb. *bábel*, Assyrian-Babylonian *Báb-ilu*, Babylon (Gate of God)].

When the elements of a compound word or a phrase, or the base of a derivative, are entered elsewhere in the dictionary, and the etymologies are given at those main entries, the etymology is in effect a cross-reference printed in small capitals directing the user to look in those places for a full etymology: under **ac·et·al·de·hyde** the etymology is [ACETYL + ALDEHYDE].

ab·o·li·tion (æbəlɪ́ʃən) *n.* the act of abolishing || [illegible] **ab·o·li·tion·ism, ab·o·li·tion·ist** *ns* [F. or fr. L. *abolitio* (*abolitionis*)] —The movement to abolish the international slave trade and the institution of chattel slavery was largely religious. It centered in Great Britain, the U.S.A. and western Europe, between c. 1783 and 1888. Following the pioneer work of Granville Sharp, the struggle was led by the Quakers, who had outlawed slavery in Pennsylvania as early as 1675. Under the leadership of William Wilberforce they obtained, almost single-handedly, the abolition of the slave trade in the British Empire and the U.S.A. by acts of Parliament and Congress in 1808. In England the struggle then became one for emancipation, while in the U.S.A. the act of Congress was blatantly defied. The U.S. movement, led chiefly by William Lloyd Garrison, Theodore Dwight Weld, and Frederick Douglass, was obstructed by the U.S. Constitution's toleration of slavery and by the South's economic defense of it. Only after the Civil War could the 13th amendment outlawing slavery be enacted. In 1862 the U.S.A. adhered to an international agreement reached in 1842 affording the reciprocal right of search, which thereafter put an end to the slave [illegible]

L. *abolitio* (*abolitionis*)] — The movement to abolish the international slave trade and the institution of chattel slavery was largely religious. It centered in Great Britain, the U.S.A. and western Europe, between c. 1783 and 1888. Following the pioneer work of Granville Sharp, the struggle was led by the Quakers, who had outlawed slavery in Pennsylvania as early as 1675. Under the leadership of William Wilberforce they obtained, almost singlehandedly, the abolition of the slave trade in the British Empire and the U.S.A. by acts of Parliament and Congress in 1808. In England the struggle then became one for emancipation, while in the U.S.A. the act of Congress was blatantly defied. The U.S. movement, led chiefly by William Lloyd Garrison, Theodore Dwight Weld, and Frederick Douglass, was obstructed by the U.S. Constitution's toleration of slavery and by the South's economic defense of it. Only after the Civil War could the 13th amendment outlawing slavery be enacted. In 1862 the U.S.A. adhered to an international agreement reached in 1842 affording the reciprocal right of search, which thereafter put an end to the slave trade

abstract expressionism a movement in American painting (since 1940), with parallels in Europe, based on the theory that color, line, form and texture, used freely in informal combination, have greater power of expression and of visual excitement than when they are used in accordance with prescribed formal concepts or to represent objects. It has evolved from ideas inherent in surrealism and expressionism, Kandinsky being a direct precursor. It seeks expression of the artist's whole being: the artist paints spontaneously, and the method is often called 'action painting'. The originators of the movement are Pollock, de Kooning, Tobey, Kline, Gorky, Rothko and Gottlieb. HISTORY The population cultivating the lower Nile valley (late 5th and 4th millennia B.C.) gave rise to the development of Egyptian civilization [illegible] had trade contacts with the coasts of Eritrea, Somaliland, S. Arabia and S. Ethiopia. Nubia was occupied (2nd millennium B.C.), and gave rise to the kingdom of Kush, where Egyptian culture survived while Egypt was conquered by Assyrians, Persians, Greeks and Romans. Kush expanded south (6th c. B.C.) from the Nile cataracts to the Sudan, founding a new capital at Meroe (mid-3rd c. B.C. to 1st c. A.D.). It was conquered (mid-4th c. A.D.) by the kingdom of Axum in the N. Ethiopian highlands. This dispersion from the Nile valley (1st–6th cc. A.D.) mingled with Arabian influence, spread west and south. The civilizations of the Sudanic peoples included the states of Ghana, Kanem, Songhai and Hausa, most of which are known to have existed by the 8th or 9th cc. A.D. Ghana perhaps by the 4th–5th cc. Meanwhile the north coast of Africa had been colonized by the Phoenicians (8th c. B.C.), who founded Carthage (c. 814 B.C.). The Greeks colonized Cyrenaica and Egypt (4th c. B.C.). The Romans destroyed Carthage (146 B.C.) and spread their influence west as far as Morocco and east to Egypt (1st c. B.C.). Carthage and Alexandria became centers for the spread of Christianity, which extended, in its Coptic form, to Nubia (5th and 6th cc. A.D.). The Roman empire in N. Africa collapsed when the Vandals invaded from Spain (415). The area was reconquered (533–48) by the Byzantine Empire. Trade routes had been established across the Sahara to Ghana, Hausa, Kanem and Songhai by the 8th c., spreading Berber influence southwards. The spread of Islam in Africa began with the conquest of Egypt by the Arabs (c. 640), and had extended by 700 to the whole of the north coast. Under the Almoravides, Islam penetrated (11th c.) across the Sahara to the Sudanic kingdoms. Meanwhile Islam had spread along the east coast (10th–12th cc.), extending into E. Africa (14th c.). European exploration beyond the north coast began when the Portuguese, seeking a new trade route to the Far East and contact with the mythical Prester John, rounded the Cape of Good Hope (1497) and explored Ethiopia (16th c.). England, France and Holland began trading in goods and slaves along the coast of W. Africa (16th c.). The British explored the upper reaches of the Nile (18th c.) and the Niger (early 19th c.) and the Germans the regions of the Niger and Lake Chad. The Dutch settled the Cape Colony (17th c.), which passed to Britain (1814), causing the Great Trek of the Boers inland to the Orange Free State and the Transvaal (1835–6). Napoleon failed to conquer Egypt (1798) but France conquered Algeria (1830–47). Among explorers, Caillié penetrated Central Africa (1827–8), and Nachtigal explored the area around Lake Chad (1869–74). Livingstone crossed the continent from west to east (1851–6) and Stanley from east to west (1874–7). The Suez Canal was cut by de Lesseps (1869). Great trading companies were formed by the colonizing powers and by 1912 the whole continent, except Liberia and Ethiopia, was partitioned among the European powers. The Berlin Conference (1884–5) tried to settle colonial rivalries, but many clashes occurred in the period prior to 1914. France clashed with Belgium over the Congo, with Britain over Egypt, the Sudan and E. Africa, and with Germany over Morocco. Britain came into conflict with Germany over S.W. and S.E. Africa, and with the Boers over S. Africa. Italy conquered Libya (1931) and Ethiopia (1936). Germany lost her colonies in 1918 and Italy lost hers in 1945. The League of Nations and the U.N. held certain former colonies in trusteeship (from 1918 and 1945). Since the 2nd world war, Africa has experienced political struggles against European powers, over Algeria, Suez and Angola, and much internal trouble, in Kenya, the Congo, South Africa, and between Israel and Egypt. There has been rapid economic development, and increasing nationalism has led to political independence for much of the continent. In 1956 Egypt, which had been independent by 1922, was evacuated by the British, and Tunisia, Morocco and the Sudan became independent. Ghana gained independence (1957), then Guinea (1958), Mali (1959), Nigeria, the Congo, Somaliland and 12 former French colonies (1960), Tanganyika (1961), Algeria, Uganda, Rwanda and Burundi (1962). The United Arab Republic of Egypt and Syria was set up (1958) but Syria withdrew (1961). Katanga seceded from the Congo (1960) and was reintegrated (1963). The Republic of South Africa left the Commonwealth (1961). In 1963, the Central African Federation, which had been set up ten years earlier, was dissolved, and Kenya became independent. Zanzibar gained independence (1963) and joined Tanganyika to

form Tanzania (1964). Nyasaland became independent as Malawi, and Northern Rhodesia as Zambia (1964). Gambia became independent (1965). Bechuanaland became independent (1966) and changed its name to Botswana. Basutoland took the name Lesotho on gaining independence (1966). Equatorial Guinea and Swaziland became independent (1968). By 1975 former Portuguese colonies Angola, Mozambique, Cape Verde, Guinea-Bissau (formerly Portuguese Guinea) and Sao Tome and Principe became independent, as did the French Comoros (1975) and Djibouti (1977) (formerly Afars and Issas) and the British Seychelles (1976). In the face of opposition from most other African countries, Britain, and the Commonwealth, white-ruled Rhodesia made a unilateral declaration of independence (1965) and later became independent Zimbabwe under black rule in 1980. Upper Volta changed its name to Burkina Faso (1984). Western Sahara, relinquished by Spain (1976) and divided between Morocco and Mauritania (who disclaimed it in 1979), was fought over by Morocco and the Polisario, an armed independence movement, through the 1980s. Unrest over the white government's traditional policy of *apartheid* in South Africa drew international attention

After the battle of Thapsus (46 B.C.), the area became the Roman province of Numidia, which passed (395 A.D.) to the Byzantine Empire. (The country is rich in Roman antiquities.) Vandals invaded (429), but Byzantine rule was restored (533). The area was controlled by the Arabs (from the 7th c.) and by the Turks (1518–1830). It became the base for Barbary pirates until France conquered the coastal region (1830). After a prolonged struggle (1835–47) with Abd el-Kader, France began to colonize Algeria, which was declared a French territory (1848). The Sahara, explored by the French (1827 onwards), passed into French control (1852) and its administration was separated from that of Algeria (1902). In the 2nd world war, Algeria became (1943–4) the headquarters of the French Committee of National Liberation. Algerian nationalists began guerrilla warfare (1954) to obtain independence, under the National Liberation Front (FLN). After seven years of fighting, a referendum in France and Algeria approved (1961) the principle of self-determination for Algeria. The country, including the two Saharan departments, became independent (July 3, 1962). Ben Bella was elected president (1963). He was deposed (1965) in a coup d'état led by Boumedienne, who became prime minister and president (1965). He nationalized French oil and natural gas concessions (1971) and was succeeded on his death (1979) by Chadli Benjedid, who was reelected (1984). Algeria mediated the Iranian hostage crisis (1980)

Alps (ælps) the greatest mountain range in Europe, forming an arc 660 miles long around N. Italy, passing through France, Switzerland, Italy, Germany, Austria, Yugoslavia. The Alps cover an area of about 80,000 sq. miles. Three principal groups are distinguished. The Western Alps separate France and Italy and include as subsidiary ranges the Maritime, Ligurian, Cottian, Graian, Dauphiné and Savoy Alps. Highest peak: Mont Blanc (15,781 ft). The Central Alps lie chiefly in Switzerland and include the Pennine, Lepontine, Rhaetian and Bernese Alps. Highest peak: Monte Rosa (15,217 ft). The Eastern or Austrian Alps include the Dolomites, the Hohe Tauern, the Noric, Carnic, Julian, Karawanken and Dinaric Alps. Highest peak: Gross Glockner (12,461 ft). There are many deep valleys and large lakes. Roads and railways cross some of the many narrow passes (St Gotthard, Brenner etc.) and tunnels have also been built (Simplon, St Gotthard, Mont Blanc etc.). The climate is continental in the east and Mediterranean in the southwest. Dairy farming and forestry are important. The upper level of crops is 6,000 ft, though little is cultivated above 4,500, and the tree line lies at 7,000 ft. Tourism is a large source of income. A·ra·bi·a (əreɪbɪ.ə) a great peninsula (area 1,200,000 sq. miles) of W. Asia in the Middle East, bounded on the west by the Gulf of 'Aqaba and the Red Sea, on the east by the Persian Gulf, on the south by the Gulf of Aden and the Indian Ocean, and on the north by the frontiers of Iraq and Jordan. Politically Arabia consists of Saudi Arabia, Yemen, the People's Democratic Republic of Yemen, Oman, Kuwait, Bahrain, Qatar and the United Arab Emirates. HISTORY. The early history of Arabia was dominated by three kingdoms, the Minaean (c. 1200–650 BC), the Sabaean (c. 930–115 BC), and the Himyarite (115 BC–525 AD). The Romans attempted unsuccessfully (24 BC) to conquer Arabia in order to control the spice trade. The Abyssinians invaded S. Arabia and established a kingdom (340–378 AD and 525–575 AD). The south then came under Persian rule (c. 579), while the north was influenced by Christian culture from Byzantium and Syria. The rise of Islam changed the history of Arabia. Mecca and Medina became the spiritual centers of the Arab world. Mohammed's successors, the Orthodox caliphs, unified Arabia into a single Islamic state (632–661), and conquered Syria, Lebanon, Palestine, Iraq, Egypt and Persia. But the Omayyad caliphate (661–750) moved its capital to Damascus, and the Abbasids (750–1258) moved it to Baghdad, causing Arabia to diminish in importance. The Mamelukes (1250–1516) and the Ottoman Turks (1516–24) claimed or held parts of Arabia. The Portuguese seized Oman (1508) but were expelled (c. 1650). Britain secured Aden (1839). Revolt against Turkish rule was begun (18th c.) by the Wahhabis and brought to success by ibn Saud with the creation (1932) of Saudi Arabia. The Federation of S. Arabia was absorbed in the People's Republic of South Yemen (later the People's Democratic Republic of Yemen). Oil production on the Persian Gulf coast, begun in the 1940s, has greatly increased Arabia's economic importance and made public welfare improvements

Ar•gen•ti•na (ɑrdʒəntiːnə) a federal republic (area 1,072,744 sq. miles, pop. 30,708,000) in S.E. South America. Capital: Buenos Aires. People: European (mainly of Italian and Spanish origin), with some Asians and a dwindling Indian minority. Language: Spanish. Religion: mainly Roman Catholic, with small Protestant and Jewish minorities. The land is 41% pasture, 32% forest and 11% cultivated. The crest of the Andes (rising to Aconcagua, 23,081 ft) forms most of the Chilean frontier. The eastern two-thirds of the country is plain: the Gran Chaco in the north (sugar, rice) between the Paraná and Uruguay Rivers, the Pampas (the east rich farmland, the west grain fields and cattle ranges) in the center, and the arid plain of Patagonia in the south. Average winter and summer temperatures (F.) in the north 56° and 83°, in Buenos Aires 49° and 74°, and in the [illegible] the northeast and in Tucumán, 38 ins at Buenos Aires, 7–15 ins in Patagonia and the Andes. Exports: raw meat (1st in the world), cereals (4th in the world), oils, linseed, dairy produce, wool, hides and skins. Imports: machinery, vehicles, iron, fuels. Ports: Buenos Aires, La Plata, Bahía Blanca, Rosario, [illegible] are six universities, the oldest being Cordoba (1613) and Buenos Aires (1821). Monetary unit: gold peso (peso oro, divided into 100 centavos). HISTORY. The Río de la Plata was discovered by Solís (1516) and explored by Sebastian Cabot (1526–30). Buenos Aires was colonized by the Spanish under Mendoza (1536) but was destroyed by Indians and rebuilt (1580). The area formed part of the Spanish viceroyalty of Peru (1617) and became the Spanish viceroyalty of Río de La Plata (1776). It won its independence from Spain after a revolutionary struggle (1810–16) and war (1817–21) under San Martín, and the United Provinces of the Plate River were set up (1816). Warfare between Federalists and Unitarians followed, checked by the dictatorship (1829–52) of Juan Manuel Rosas. A federal constitution was drawn up in 1853. Argentina, with Brazil and Uruguay, fought Paraguay (1865–70). British capital developed the railways, ports, and the meat export industry (from 1860). Argentina was governed under military dictatorships (1930–45). In the 2nd world war it declared war on Germany in March 1945. Perón became president in 1946 but he was overthrown by a military revolt in 1955, leaving grave economic problems. Gen. Pedro E. Aramburu, provisional president (1955–8) restored the constitution of 1853 and called (1958) elections. The new president, Arturo Frondizi, failed to improve the economy and was deposed (1962) by a military coup. The elections of 1963 were won by Arturo Illia. His strong nationalistic line in foreign affairs failed to satisfy the military, who feared the return to Peronismo and he too was deposed (1966). A military junta presided over by Gen. Juan Carlos Onganía proceeded to dissolve Congress, suppress political parties, and deprive the universities of their autonomy. In 1968 he rid himself of a significant liberal opposition to his idea of a tightly controlled corporate state by dismissing his army, navy and air force chiefs, but in 1970 he fell to a coup led by Gen. Roberto M. Levingston, who then assumed the presidency. Levingston was in turn ousted (1971) by the junta he had led, and was replaced by Lieut. Gen. Alejandro Lanusse. Perón became president again in 1973 but died the following year and was succeeded by his third wife, Isabel, who was overthrown by the military (1976). Following an unsuccessful war with Great Britain (1982) over possession of the Falkland Islands, Argentina elected Raúl Alfonsín, a civilian, as president. He faced an economic crisis with uncontrolled inflation and a huge foreign debt

HISTORY (see also separate entries). The earliest Asian civilizations were those of Sumer and Akkad in Mesopotamia and of the Indus valley in India (3rd millennium B.C.). In the 2nd millennium B.C. first the Amorites and then the Kassites invaded Mesopotamia, while Asia Minor was invaded by the Hittites, and the Indus valley by the Aryans. Chinese civilization developed under the Chou dynasty (1122–221 B.C.) The Assyrians conquered Babylonia (13th c. B.C.) and created an empire which reached its peak in the 7th c. B.C., to be captured by the Medes and Babylonians (605 B.C.) and then by the Persians (539 B.C.). The 5th c. B.C. saw the spread of the teachings of Confucius, Zoroaster and Buddha. The Persian Empire was destroyed (331 B.C.) by Alexander the Great, who extended Greek power from the Mediterranean to the Indus. Central Asia came under the domination of China during the Han dynasty (206 B.C.–220 A.D.). The Roman Empire spread as far as the Euphrates, but Constantinople and its Eastern Empire separated from Rome (395 A.D.), and Roman power in Asia was opposed by Persia under the Sassanids. In the 7th c. the Arabs extended the power of Islam to Persia, Syria and Israel, ruling their empire from Baghdad (750–1258). The Turks conquered most of Asia Minor, and their capture of Jerusalem (1072) led to the Crusades (1095–1291). The Mongols, under Genghis Khan and his descendants, conquered China, Manchuria, Korea, N. India and E. Russia (13th–14th cc.). Persia regained independence under the shahs, and China under the Ming dynasty (1368–1644). Constantinople was taken by the Ottoman Turks (1453), and the Mogul Empire was established in India (16th–17th cc.).

European conquest in Asia dates from the voyage of Vasco da Gama round the Cape to India (1498). The Portuguese monopoly of Asian trade was destroyed by Holland, England and France. Trade with the coasts and islands was developed by the English East India Company (1600) and the Dutch East India Company (1602), and colonization followed. Britain defeated France (1763) in the struggle for control of India, and established the British Raj. The East Indies were colonized by Holland (17th–20th cc.) and Indo-China by France (1862–83).

In Russia, Ivan the Great threw off the domination of the Tatars (1480) and the Cossacks began settling Siberia (16th c.). By the 17th c., Russia had spread to the Pacific and collided with Japanese expansion (1904–5). Japan, which had already defeated China (1895), emerged victorious, annexed Korea (1910), and occupied Manchuria (1932–45). China, which had been a republic since 1912, was invaded by Japan (1937), which then overran S.E. Asia until defeated by the Allies (1945).

European influence has given place politically since 1945 to national independence and self-government. India, Pakistan, Sri Lanka, Cyprus, Burma, Malaya and Singapore were granted independence by Britain, Indochina won independence from France, and Indonesia from Holland. The state of Israel was created, Arab nationalism began to assert itself, China came under a communist government (1949) and anti-communist alliances (SEATO, 1954, and the Baghdad Pact, 1955) were formed. Malaya, Singapore, Sarawak and North Borneo united to form the Federation of Malaysia (1963), but Singapore seceded (1965). Vietnam became a communist country following a long civil war (1975). Laos and Cambodia (Kampuchea) also fell to the communists that same year. The U.S.S.R. invaded Afghanistan (1979) but resistance to their control continued. In many parts of Asia ethnic and religious differences have led to conflicts: Iran-Iraq, India-Pakistan, Arabs-Israelis, and Muslims-Christians in Lebanon among others, making much of Asia the scene of hostilities

Asia dollar (*economics*) money market term for U.S. currency based in Singapore, controlled by Monetary Authority of Singapore *Cf* EURODOLLAR

Asia Minor the historic name for that peninsula (area about 200,000 sq. miles) of W. Asia which now forms the greater part of Turkey. It is bordered by the Black Sea, the Sea of Marmara, the Aegean and the Mediterranean, and by the Armenian plateau on the east. It is separated from Europe by the Bosporus and Dardanelles on the northwest. It forms an elevated plateau sloping northwards and westwards, with mountain ranges in the east. After the decline of the Hittite kingdom (1900–1200 B.C.) and the conquest of Troy and the Trojan allies, the coast was colonized by the Greeks (1000 B.C.) while Phrygia and Lydia developed in the interior. It was conquered by Cyrus II of Persia (546 B.C.) and by Alexander (333 B.C.) and was divided into several small Hellenistic states. It became part of the Roman and Byzantine Empires and was raided by Arabs (from the 7th c.) and by the Seljuk Turks (11th c.). The Crusaders set up the empire of Trebizond (1204–1461) overrun successively by the Seljuk Turks, the Mongols and the Ottoman Turks. Asia Minor gradually became part of the Ottoman Empire (14th and 15th cc.).

As·syr·i·a (əsíri:ə) an ancient kingdom in N. Mesopotamia lying mainly between the Tigris and Euphrates Rivers, with its capital first at Assur and later at Nineveh. Linked culturally with Babylonia, Assyria expanded to form an empire (c. 1950–c. 1750 B.C.), but then declined until c. 1500 B.C. A new period of conquest, esp. during the reign (c. 1116–1078 B.C.) of Tiglath-pileser I, created a state typified by bureaucracy and harsh laws. The reigns of Shalmaneser III (858–c. 824 B.C.) and Tiglath-pileser III (746–728 B.C.) saw renewed conquests over neighboring peoples. Assyria attained its greatest extent, reaching Armenia, Arabia and Egypt, in the reigns of Sargon II (721–705 B.C.), Sennacherib (705–681 B.C.), Esarhaddon (680–669 B.C.) and Ashurbanipal (668–633 B.C.). Under these kings Assyrian art and architecture were at their height, notable particularly for the bas-reliefs on temples and palaces. A vast library of cuneiform tablets was assembled at Nineveh. After Ashurbanipal's death, the empire fell to the Medes and Babylonians (c. 616–606 B.C.)

At·jeh, A·cheh (útʃe) a province (area 21,381 sq. miles, pop. 1,500,000) of Indonesia in N.W. Sumatra. Capital: Kotaradja. The people are Moslems of Indonesian-Dravidian stock. Crafts: wood and gold work, silk weaving. Exports: rubber, pepper, copra

At·kin·son (ætkinsən), Sir Harry Albert (1831–92), prime minister of New Zealand noted for financial and social reforms, and the introduction of protective duties

At·kins, Tommy (ætkinz), *TOMMY

At·lan·ta (ætlæntə) a city (pop. 425,022, with agglom. 2,029,618) of Georgia, commercial and financial capital of the Southeast. University (1865). Atlanta was the Confederate center in Georgia around which several engagements of the Civil War were fought. The Atlanta conflict (July 20–Sept. 2, 1864) ended with Gen. William T. Sherman forcing the Confederate forces to evacuate the city. The victory assured Abraham Lincoln's success in the presidential elections of 1864

atlantes *pl.* of ATLAS (a pillar)

At·lan·tic (ətlæntik) **1.** *adj.* of or close to the Atlantic Ocean **2.** *n.* the Atlantic Ocean [fr. L. fr. Gk *Atlantikos* fr. *Atlas* (*ATLAS)]

Atlantic Charter a joint declaration by F. D. Roosevelt and Winston Churchill (who met at sea, Aug. 14, 1941) of eight principles to guide a postwar settlement

Atlantic City a noted resort and amusement center in S.E. New Jersey (pop. 40,119). A long-time attraction was a 4-mile boardwalk of steel and concrete (1896). After gambling was legalized (1976), casinos were built along the boardwalk. Gambling revenues revitalized the city

At·lan·ti·cism (ətlæntisizəm) *n.* policy of greater cooperation between United States and Western Europe —**Atlanticist** *n.*

Atlantic Ocean the ocean (area incl. the Arctic Ocean, Antarctic waters, seas and gulfs, 41,000,000 sq. miles) separating America from Europe and Africa. Length (Bering Strait–Antarctica): 12,800 miles. Width from Florida, U.S.A. to Portugal: 4,000 miles. The Atlantic Ridge (300–500 miles wide), of which the Azores, Ascension, St Helena and Tristan da Cunha are summits, divides it into eastern and western valleys (mainly 2,000–3,000 fathoms). Deeps reach 4,800 fathoms (Puerto Rico trench)

Atlantic Pact *NORTH ATLANTIC TREATY ORGANIZATION

Atlantic Time (in Nova Scotia, New Brunswick, Prince Edward Island, E Quebec) time as reckoned from the sun's crossing the 60th meridian west of Greenwich (four hours behind Greenwich Mean Time)

At·las (ætləs) (*Gk mythol.*) a giant who held up the heavens on his shoulders, identified later with Mt Atlas in N. Africa

at·las (ætləs) *n.* (*physiol.*) the first vertebra in the neck, which supports the head ‖ a book containing a collection of maps, after the famous [illegible] *pl.* **at·lan·tes** (ætlænti:z) a pillar in the form of a man, supporting a weight (cf. CARYATID) [L. fr. Gk]

At·las (ætləs) *n.* (*mil.*) surface-to-surface intercontinental ballistic missile used in launching spacecraft

Atlas Mtns a mountain system running for 1,500 miles parallel to the N. African coast from Cape Ghir to the Gulf of Gabes. The main range is High Atlas (over 6,500 ft) in Morocco, flanked on the northwest by Middle Atlas and on the southwest by Anti-Atlas (a tableland). The Maritime Atlas stretches from Ceuta to E. Algeria, the Sahara Atlas of Algeria from Figuig to Biskra. Minerals, esp. phosphates, are exploited

at·mol·y·sis (ætmɔlisis) *n.* a method of separation of a mixture of gases by means of the differential diffusion of the constituent molecules through a porous partition [Mod. L. fr. Gk *atmos*, vapor + *lusis*, a loosening]

at·mos·phere (ætməsfiər) *n.* the gases that surround the earth, divided into layers according to such criteria as rate of temperature change with increasing altitude, composition and electrical nature (*TROPOSPHERE, *TROPOPAUSE, *STRATOSPHERE, *STRATOPAUSE, *MESOSPHERE, *MESOPAUSE, *IONOSPHERE) ‖ the air in any enclosed space with respect to its effects on people or things subjected to it, *a stuffy atmosphere* ‖ a set of prevailing moral or mental influences on an institution, locality, group etc., *an atmosphere of suspicion* ‖ a unit of pressure equal to that exerted by a column of mercury 76 cm high at 0°C and under standard gravity

at·mos·pher·ic (ætməsférik) adj. **at·mos·phér·i·cal** *adj.* [fr. M od. L. *atmosphera* fr. Gk]

atmospheric pressure the pressure exerted by the earth's atmosphere: 14.72 lb. per sq. in. at sea level, decreasing with height above sea level and varying with the weather. The unit of pressure is the atmosphere

at·mos·pher·ics (ætməsfériks) *n.* natural electromagnetic radiations of radio frequency, or the resulting disturbances in radio equipment

at·mo·sphe·ri·um (ætməsfiəriəm) *n.* area or device created in which to simulate atmospheric or meteorological phenomena, e.g., a planetarium

a·toll (ætɔl) *n.* a coral reef in the shape of a ring [illegible] enclosing a lagoon [Maldive]

at·om (ætəm) *n.* the smallest portion of matter displaying the characteristic properties of a particular chemical element ‖ (*hist.*) the ultimate, indestructible particle taken by some early Greek and Indian thinkers, and by the Roman Lucretius, to be the basis of all matter ‖ a very small quantity, *not an atom of truth in it* [F. fr. L. fr. Gk *atomos*, indivisible]

—The atom consists of a heavy nucleus composed of neutrons and protons held together by extremely strong nuclear forces surrounded by a cloud of electrons. The number of protons is [illegible]

The number of neutrons varies from isotope to isotope (*NUCLIDE) for a given element. In the neutral atom the number of electrons equals the number of protons, thus balancing the nuclear charge. The electrons are grouped in shells (energy levels, *QUANTUM THEORY) and, within the shells, in orbitals and suborbitals in [illegible] ple is obeyed (*PERIODIC TABLE). According to Heisenberg's uncertainty principle it is not possible to determine exactly both the position and the momentum of an electron, and hence no [illegible] orbit but rather definite values representing [illegible] the neighborhood of the nucleus (*QUANTUM MECHANICS). The number of electrons which can be added to or withdrawn from the atom, esp. the valence shell and the energy required for this, determine the chemical reactivity of the element. The atom has a very open structure. The diameter of a nucleus is of the order of 10^{-13}. The nucleus [illegible] from the even smaller electrons by a distance of the order of 10^{-8} cm

at·om·ar·i·um (ætəméiriəm) *n.* room or structure created to provide illustration of phenomena of atomic and nuclear physics for study

atom bomb an atomic bomb

a·tom·ic (ətɔmik) *adj.* of, related to, or characterized by atoms **a·tóm·i·cal·ly** *adv.*

atomic bomb a very powerful bomb whose energy is derived from an extremely rapid nuclear chain reaction in which heavy nuclei of uranium or plutonium are broken down (*NUCLEAR FISSION, cf. NUCLEAR FUSION)

atomic clock a very accurate timepiece consisting of a quartz crystal or other electrical oscillator regulated by natural vibration frequencies from an atomic system

atomic energy *NUCLEAR ENERGY

Atomic Energy Commission formerly an independent U.S. agency (*abbr.* AEC) of the executive branch of government created (1946) to administer the national atomic energy program which stemmed from the development of the atomic bomb in the 2nd world war. *NUCLEAR REGULATORY COMMISSION

atomic heat specific heat (expressed in calories/gram) multiplied by the atomic mass of an element (*DULONG AND PETIT'S LAW)

at·o·mic·i·ty (ætəmisiti:) *n.* the state of being made up of atoms ‖ (*chem.* and *phys.*) the number of atoms in a molecule of an element

atomic lamp light source in which radio activity provides the energy, e.g., zinc sulfide phosphor activated by radioisotope of krypton gas

atomic mass (*abbr.* at. mass) the mass of an atom of an element on the atomic mass scale

atomic mass scale the scale, adopted in 1962, used for comparing the masses of atoms, molecules and nuclear particles. The mass unit is defined as one twelfth of the mass of the carbon isotope C^{12}, which was adopted as the standard substance. Before 1962 two scales existed, one based on the chemical a.m.u. defined as one sixteenth of the mass of naturally occurring oxygen, and the other on the physical a.m.u. defined as one sixteenth of the oxygen isotope O^{16}

atomic mass unit (*abbr.* a.m.u.) the unit of mass on the atomic mass scale (1 a.m.u. = 1.66×10^{-24} gm)

atomic number (*symbol Z, abbr.* at. no.) the number characteristic of an element, including all its isotopes and equal to the number of protons in the nucleus of any atom of that element, also equal to the number of electrons in a neutral atom. It determines the position of the element in the periodic table

atomic physics (*phys.*) science concerned with structure of the atom and the particles which compose it *Cf* PARTICLE PHYSICS

atomic pile a nuclear reactor

atomic spectrum the emission or absorption spectrum of an atom or monatomic ion. Spectra of atoms are particularly simple because atoms do not interact with infrared or microwave radiation (i.e. they do not have quantized vibrational or rotational states). In an effort to explain the noncontinuous nature of atomic spectra Bohr invoked the quantum hypothesis, arguing that radiation of energy by circulating electrons could only occur between discrete values of energy (*QUANTUM THEORY), and that there were minimum energy levels for electrons in atoms

atomic theory the theory that all matter is composed of a limited number of discrete particles, separate or in combination with each other [illegible] such atoms, modern ones being in terms of a small heavy nucleus surrounded by electrons (*QUANTUM THEORY)

atomic time time based on the frequency of atomic emissions of certain substances (*Cf* ATOMIC CLOCK)

atomic weight atomic mass

at·om·ism (ætəmizəm) *n.* (*philos.*) the doctrine, [illegible] to the Greek philosophers Leucippus and Democritus, that all matter consists of different arrangements of a limited number of indivisible particles or atoms **at·om·ist** *adj.* and [illegible] **atomistic** [illegible]

at·om·ize (ætəmaɪz) *pres. part* **at·om·iz·ing** *past* and *past part.* **at·om·ized** *v.t.* to convert (a liquid, e.g. a perfume, insecticide or medicine) into very fine particles, generally as a spray forced through a nozzle **at·om·iz·er** *n.* a device for atomizing a liquid

at·om·om·e·ter (ætəmɒmətər) *n.* (*meteor.*) device for measuring capacity of air to absorb moisture

atom probe a spectrometer of single-atom sensitivity consisting of a field-ion microscope with a hole in its fluorescent screen, a flight table, and a detection device for single-particle sensitivity; invented by Dr Erwin Müller in 1967

atom smashers atomic-particle accelerators *Cf* BETATRON

a·ton·al (eɪtóun'l) *adj.* (*mus.*) written without key, i.e. using all 12 semitones of the chromatic scale equally (*SCHONBERG) **a·tón·al·ism** *n.* the theory or principle of such composition **a·ton·al·is·tic** *adj* **a·to·nal·i·ty** (eɪtounælɪtɪ:) *n.* the musical quality of atonal composition

a·tone [illegible] *pres. part* **a·ton·ing**, *past part* **a·toned** **1.** *v.i.* to make amends (for some sin, wrong or omission) **2.** *v.t.* (used only passively and with 'for') to make amends for, *these crimes will have to be atoned for someday* [back-formation from ATONEMENT]

a·tone·ment (ətóunmənt) *n.* the act of atoning | that which is done in order to atone **the A·tone·ment** in Christian theology, Christ's incarnation and death on the cross, which made up for the original sin of Adam and Eve, and enabled mankind to be at one with God again [illegible]

a·ton·ic (eɪtɒnɪk) *adj* (*phon.*) without stress, *the first syllable of 'atone' is atonic* || (*mus.*, sometimes preferred to 'atonal') describing a composition not in a key but based on several tonic centers [fr. M.L. *atonicus* fr. Gk *atonos* fr. *a-*, [illegible]]

at·o·ny (ætˈnɪ) *n.* (*med.*) lack of vitality, weakness of a muscle or of an organ | (*phon.*) lack of stress or accent [F. *atonie* fr. L. fr. Gk]

AT Pase adenosine triphosphatase, an enzyme common to all body cells, that helps pump sodium and potassium across cell membranes; responsible for 10% to 50% of body heat energy production

at·ra·bil·iar (ætrəbɪljər) *adj.* atrabilious

at·ra·bil·ious (ætrəbɪljəs) *adj* gloomy and sour-tempered, overanxious and fussy about one's [illegible]

ATRAN (ætræn) (*mil. acronym*) for automatic terrain recognition and navigation, system for missile navigation based on superimposing radar data over prior map

[illegible]

a weed killer used esp. in raising corn and sorghum

A·tre·us (etrɪ:əs) (*Gk mythol.*) a son of Pelops and king of Mycenae. After his brother, Thyestes, seduced Atreus's wife, Atreus murdered three sons of Thyestes, and had them served to their father at a banquet. Thyestes laid a curse on the house of Atreus which manifested itself bloodily in the next generation. It was lifted when Athena pardoned Orestes's murder of Clytemnestra and her lover Aegisthus, another son of Thyestes, who had murdered Agamemnon. Atreus himself had been killed by Aegis-

It is used medically to dilate the pupil of the eye, and to relieve spasms etc. [fr. Mod. L. *Atropa*, deadly nightshade fr. Gk *Atropos*]

At·ro·pos (ætrəpɒs) *FATES

ATS (*abbr.*) for administrative terminal system, an IBM word-processing system permitting a typist to recall previously recorded texts for insertion in material being typed

at·tach (ətætʃ) *v.t.* to fasten, connect (one thing to another), *attach a hook to the line, two conditions are attached to his offer* || to bind by love or esteem || to appoint or assign in some added role, *he is attached to the commission as an observer* || (*mil.*) to place temporarily under the orders of some other unit for specified purposes || (*law*) to seize (a person or property) by legal authority || to attribute, *to attach blame* || *v.i.* to be fastened in some specified way || (*fig.*) to adhere, *no blame attaches to him* [O.F. *atachier*]

at·ta·ché (ætæʃéi, *Br.* esp. ətáʃei) *n.* a person attached to an embassy for some specific activity, *press attaché* [F.]

attaché case a small rectangular case (often of leather) for carrying papers or personal effects

at·tach·ment (ətætʃmənt) *n.* the act of attaching one thing to another || the device or method by which one object is attached to another || the object attached || a bond of affection or friendship || (*law*) the legal seizure of persons or property [F. *attachement*]

at·tack (ətæk) *n.* the act of attacking || a bout of illness, *an attack of flu* || (*mus.*) the action or manner of beginning a piece or phrase || (*sport*) offensive rather than defensive play [F. *attaque* or ATTACK v.]

attack *v.t.* to set upon, try to get the better of or destroy or win || to assail in words or writing || to start upon (a difficulty, task or occupation) || to have a harmful or destructive effect on || (*chess*) to threaten with a view to capturing || *v.i.* to make an attack [F. *attaquer*]

attack man (*sports*) team player assigned to offensive position

at·tain (ətéin) *v.t.* to arrive at, obtain, win **to attain to** to arrive at, *to attain to full maturity* **at·tain·a·bil·i·ty** *n.* **at·tain·a·ble** *adj.* [M.E. *ateyne, ateine* fr. O.F.]

at·tain·der (ətéɪndər) *n.* the loss of all rights as a citizen, part of the punishment of a person condemned to death or outlawry for treason or felony (now abolished) [O.F. *ataindre, ateindre*, to accuse]

at·tain·ment (ətéɪnmənt) *n.* the act of attaining || an acquired personal skill

at·taint (ətéɪnt) *v.t.* (*hist.*) to pass sentence of attainder upon [O.F. *ataint, ateint*, convicted]

at·tar of roses (ætər) a sweetsmelling essential oil distilled from the petals of *Rosa damascena* [fr. Pers. *itr*, perfume fr. Arab.]

at·tempt (ətempt) **1.** *v.t.* to try (to do something), to try or make trial of, *I am attempting to answer you, don't attempt more than three questions* to try to achieve, *to attempt a rescue* **to attempt the life of** (*rhet.*) to try to kill **2.** *n* the act of attempting, often unsuccessful || a failed attack by a killer [O.F. *attempter*]

at·tend (ətend) *v.t.* to be present at, *a huge* [illegible] *attends evening classes* to visit and treat (as doctor, nurse etc.) to accompany as attendant | to accompany (often as a result), *success attended his final effort* *v.i.* (*Br.*) to pay attention **to attend to** to apply oneself to || to care for, look after to wait upon, serve **to attend upon** to accompany (esp. royal personages) for the purpose of giving service [M.E. *atende* fr. O.F.]

at·tend·ance (ətendəns) *n* the act or habitual practice of attending, being present, *attendance at school* those who are present or attend, *the attendance at his lectures is increasing* **to dance attendance on** to run about after somebody) to do their least bidding [O.F. *atendance*]

at·tend·ant (əténdənt) **1.** *n* a servant, an employee in charge, *a cloakroom attendant* a companion, usually of lower rank, *the prince's attendants* (*rhet.*) an accompaniment, *ignorance and its attendants fear and prejudice* **2.** *adj* accompanying *war and its attendant horrors* [O.F. *atendant*]

at·ten·tion (ətenʃən) *n* the giving of one's mind to something, mental concentration notice, *sure to attract attention* nursing, care, looking after, *he needs attention* a mending or overhauling, *the brakes need attention* service by a waiter etc. || (*mil.*) the formal position of readiness on parade: upright and still, hands held stiffly at the seam of the trousers or skirt, fingers pointing downward, feet together || (*mil.*) the order to come to this position || (*interj.*) used as a warning word before an important announcement to impress the need to listen || (*pl.*) attentiveness, acts of politeness, *his constant attentions annoyed her* **to call attention to** to point out [fr. L. *attentio (attentionis)*]

at·ten·tive (əténtiv) *adj.* paying attention, giving one's mind to what is going on || thoughtful for others, esp. so as to meet their immediate needs or wishes [F. *attentif*]

at·ten·u·ant (ətenju:ənt) **1.** *adj.* (*med.*) making thin, diluting, e.g. by adding water **2.** *n.* a substance used for this purpose [F.]

at·ten·u·ate (ətenju:eit) **1.** *v. pres. part.* **at·ten·u·at·ing** *past* and *past part.* **at·ten·u·ated** *v.t.* to make thin or slender || to dilute (a liquid) || to weaken, *inbreeding can attenuate the vigor of a breed* || *v.i.* to become thin, weak etc. **2.** (ətényu:it) *adj.* attenuated **at·ten·u·a·tion** (ətenju:éiʃən) *n.* [fr. L. *attenuare (attenuatus)*, to make thin]

at·ten·u·a·tion (ətenju:éiʃən) *n.* **1.** a reduction in an observed correlation or because of measurement error **2.** (*electr.*) decrease in intensity of a signal, beam, or wave as a result of absorption of energy and of scattering out of the path of a detector, but not including the reduction due to geometric spreading, i.e., the inverse square of distance effect **3.** (*mil.*) in mine warfare, the reduction in intensity of an influence as distance from the source increases

attenuation factor the ratio of the incident radiation dose or dose rate to the radiation dose or dose rate transmitted through a shielding material; the reciprocal of the transmission factor

at·test (ətést) *v.t.* to bear witness to, esp. by signing (a statement) || to confirm as authentic, *his secretary attests the truth of his statement* || to administer an oath to || (*Br.*) to certify the freedom of (livestock) from a specific disease || *v.i.* to testify [F. *attester*]

at·test·ant (ətéstənt) **1.** *adj.* attesting **2.** *n.* someone who attests [fr. L. *attestans (attestantis)* fr. *attestari*, to bear witness]

at·tes·ta·tion (ætestéiʃən) *n.* the act of bearing witness || the evidence given by a witness || confirmation of truth or authenticity, *the company's seal is sufficient attestation* || the administering of an oath [F.]

at·tes·tor (ətestər) *n.* someone who attests

At·tic (ætik) **1.** *adj.* (esp. of classical times) of Attica or Athens || of the dialect of Attica || (of literature and the arts) elegant in style, classical **2.** *n.* the Attic dialect of ancient Greek [fr. L. fr. Gk *Attikos*]

Aus·tral·ia (ɔstréiljə) a continent in the southern hemisphere, and (Commonwealth of Australia) federal dominion (area 2,271,081 sq. miles, pop. 15,862,000, incl. Tasmania) within the British Commonwealth. Federal capital: Canberra. Largest towns: Sydney, Melbourne, Brisbane, Adelaide. Outlying territories administered by Australia include: Australian Antarctic Territory, Christmas Is., Cocos (Keeling) Is, Norfolk, and Papua and New Guinea **People:** mainly of British stock, with small minorities from other European countries, 40,000 full aborigines, and 39,000 part aborigines **Language:** English. **Religion:** 82% Protestant, 9% Roman Catholic, small Orthodox minority. Three quarters of Australia lies between the 600 ft and the 1,500 ft contours, in the form of a huge dry plateau (incl. the Great Sandy Desert, the Great Victoria Desert and the Nullarbor Plain). The arable land is mainly on the coastal plains of the eastern coast and in the southwest corner of Australia, but hitherto arid parts are being brought under cultivation by irrigation. The longest rivers include the Murray, the Darling and the Murrumbidgee. The mountains of Australia are relatively low, Mt Kosciusko on the Victoria-New South Wales border in the Great Dividing Range being only 7,316 ft. The biggest lakes are the shallow salt lakes in the center: Lake Eyre, Lake Torrens. The Great Barrier Reef runs for 1,200 miles 10–100 miles off the eastern coast. 39% of Australia lies within the Tropics. Most of the northerly areas have a monsoon climate (wet season Jan.–Apr.). Rainfall along the coast is 30–60 ins, but most of Australia receives less than 30 ins. **Livestock:** sheep, cattle. Agricultural products: wool (29% of world output), meat, cereals, sugarcane, dairy products. Mineral resources: coal, copper, gold, lead, uranium, silver, zinc, iron. **Manufactures:** steel, food processing, ships, machinery, plastics, textiles, chemicals, vehicles, airplanes. **Exports:** wool, wheat, meat, cane sugar, fruit, ores and concentrates, hides and skins, butter, flour, barley, lead. **Imports:** machinery, vehicles, fertilizers, textiles, petroleum products, chemicals, paper. Main ports: Sydney, Newcastle, Adelaide, Melbourne. There are 14 universities, the oldest being Sydney (1850) and Melbourne (1853). Monetary unit: Australian dollar (100 cents). HISTORY Australia, sparsely inhabited by aboriginal tribes, was discovered by the Portuguese in the 16th c. The north and west coasts were explored by the Dutch early in the 17th c., and were named New Holland. Tasman discovered Tasmania (1642–3). Dampier navigated the west coast (1688). Cook discovered Botany Bay and claimed the east coast region for Britain, naming it New South Wales (1770). The English began to transport convicts to Australia (Jan. 26, 1788) after the loss of the American colonies, and continued transportation until c. 1840. Flinders circumnavigated the continent (1801–3), and introduced the name Australia for the whole continent. Settlements developed early in the 19th c., esp. after the crossing of the Blue Mtns in 1813 and the introduction of merino sheep. Self-government was adopted in the separate colonies in the 1850s. The aborigines lost their food-gathering grounds and dwindled. There were rapid developments after the gold rush (1851) and the opening up of the Murray-Darling basin. Six colonies were founded: New South Wales (1788), Tasmania (1803), Western Australia (1829), Victoria (1835), South Australia (1836), Queensland (1859). These became states forming the Commonwealth of Australia (1901), to which were added the Northern Territory and the Australian Capital Territory (1911). Australia fought in both world wars as an ally of Britain and joined the ANZUS pact (1951) and the Colombo Plan (1950). It granted independence to Papua New Guinea (1975). Active in Asian and Pacific affairs, Australia has taken a stand in favor of a nuclear-free zone in the South Pacific

Aus·tral Islands (ɔ́strəl) (Tubuai Is) a chain (about 850 miles long) of 7 small volcanic islands and atolls (total land area 67 sq. miles, pop. 4,000) in the S. Pacific, part of French Polynesia. Religion: Protestant. Capital: Moerai

Aus·tra·sia (ɔstréiʒə, ɔstréiʃə) the eastern dominion of the Merovingian Franks, centered on Metz. It existed from the death of Clovis (511) to the reign of Charlemagne (768–814)

Aus·tri·a (ɔ́strɪə) a republic (area 32,373 sq. miles, pop. 7,559,440) in central Europe. Capital: Vienna. Language: German, apart from small Croat and Magyar minorities in Burgenland, and small Slovene groups along the Yugoslav border. Religion: nine-tenths Roman Catholic, with a small Protestant minority. Jews formed 3% of the population in 1938 but were almost exterminated under Nazi rule. The land is about 28% arable, 30% pasture and 37% forest. The eastern Alps, rising to 12,000 ft in the Hohe Tauern, cover the west and part of the center and east. The fertile Alpine foreland forms a narrow plateau (1,000–2,000 ft) between the Alps and the Danube. North of the Danube stretch the hills of the Bohemian Forest. The extreme east is lowland, joining the Hungarian plain. Average winter and summer temperatures (F.): 27° and 65°. Average annual rainfall: 28 ins. Livestock: cattle, pigs, poultry. Crops: rye, oats, barley, wheat, potatoes, sugar beet, vines. Mineral resources: lignite, iron ore, magnesite, top-grade graphite, oil, salt. Manufactures: pig iron, steel, cotton, wool, chemicals, machinery, electrical goods, paper, pulp, timber, glass, aluminum, synthetic fibers, beer. Tourism is important. Exports: timber, electric[illegible]site, textiles, chemicals, machinery. Imports: [illegible] economy were nationalized in 1946–7. The Danube is an important waterway. Nearest seaport: Trieste (in Italy). There are three universities (Vienna, Graz and Innsbruck). Monetary unit: schilling (divided into 100 groschen). HISTORY The area was inhabited by Celts when Rome conquered it (c. 15 B.C.). It was invaded by Vandals, Visigoths and Huns (5th c. A.D.) and settled by Alemanni, Avars and Slavs (5th and 6th cc.). Charlemagne defeated the Avars (795) and set up (803) the East Mark (later Österreich). Otto I finally repelled the Magyars (955). Austria was ruled by the Hapsburgs (1278–1918), who took the title of Holy Roman Emperor (1438–1806) (*HOLY ROMAN EMPIRE, *GERMANY). The empire was weakened and reduced by wars: the Thirty Years' War (1618–48), the War of the Spanish Succession (1701–14), the War of the Austrian Succession (1740–8), the Seven Years' War (1756–63) and the Napoleonic Wars. Francis II united the territories under the new title of Emperor of Austria (1804). Austria took the dominant part in the German Confederation under the direction of Metternich (1815–48), but was forced by Prussia to withdraw from German affairs (1866). The dual monarchy of Austria-Hungary lasted from 1867 to 1918. Austria then became a federal republic (1919–38). It was annexed by Germany (1938–45) and occupied by the Four Powers (1945–55). A state treaty (1955) reestablished the 1938 frontiers and ended the occupation. Austria joined the U.N. later that year. Its series of coalition governments was broken from 1966–70 on a People's party administration and from 1970–83 by a Socialist government, after which another coalition took power

Aus·tri·a-Hun·ga·ry (ɔstriəhʌŋgəri:) the dual monarchy of the Hapsburg Empire (1867–1918). It included Austria, Hungary, and parts of modern Czechoslovakia, Italy, Poland, Rumania, Russia and Yugoslavia. Austria and Hungary formed two separate kingdoms under one crown, united for foreign affairs, defense and finance. (The total area in 1910 was 261,239 sq. miles, pop. 51,000,000). It was a member of the Triple Alliance with Germany and Italy (1882–1914). It annexed the Turkish provinces of Bosnia and Herzegovina (1908). The assassination of the heir to the throne, Archduke Franz Ferdinand, by Bosnian Serbs (1914) precipitated the 1st world war. The monarchy ceased to exist with the proclamation of the Austrian republic (1918). There emerged the independent states of Austria, Hungary, Czechoslovakia and Poland. Parts of the old monarchy passed to Italy, Rumania and Yugoslavia (1919)

—The Bible is a collection of religious books comprising the Old Testament, sacred to both the Jewish and Christian faiths and the New Testament, acknowledged only by Christians. The Old Testament consists of 39 books, most of which were written originally in Hebrew, some in Aramaic. Its books were written, revised, edited and reedited between approximately 1000 B.C. and 100 A.D. It is divided into the Pentateuch, the five books of the Law, the Prophetical books (including the main historical books as well as the works of the Prophets), and the Hagiographa, or sacred writings, containing the poetical and sapiential books and the remainder of the historical books. Some of the Old Testament books, the Apocrypha, were not placed within the sacred canon by the Jews of

Palestine and are regarded by Christians as sources of edification rather than doctrine they are included in the canon of the Vulgate and are therefore regarded as authoritative by the Roman Catholic Church The [illegible] treats of the creation and fall of man, of God's covenant with his chosen people, the [illegible] law and ritual of the Jewish faith, the vicissitudes of the Jews, the utterances of the prophets and apocalyptists, and the wisdom and poetry attributed to David and [illegible] Though modern scholarship doubts the authorship of many of the books, e.g. of the first five (sometimes called Moses: most books should be regarded as traditional material, collected and edited later)

The New Testament, written originally in Greek, comprises 27 books The first four record the life and teaching of Jesus Christ, regarded by Christians as the savior foretold in the Old Testament They affirm his reconciling mission from God to man, and [illegible] crucifixion. Acts records the spreading of the gospel by his Apostles The Epistles are letters by the Apostles to the young Christian Churches of the Mediterranean world It is thought that the Gospels are based on collections of the sayings and acts of Christ, current in the 50 years or so after his death

The Jewish community, in which Christianity developed, was mainly Greek-speaking, and was spread throughout the Roman Empire The Old Testament was early translated (3rd and 2nd cc. B C) into Greek (SEPTUAGINT) This version, and an old Latin one, were used by Jerome in the 4th c. A D as the basis for a new version, the Vulgate, still the official version of the Roman Catholic Church

During the Latin Middle Ages, the Vulgate was the source of all biblical teaching Theology took the form largely of expositions of the Scripture, more allegorical than literal But textual scholarship was not unknown Alcuin circulated a purified Latin text, and later scholars debated with learned Jews There were attempts to render the Bible into the vernaculars, and versions circulated in France, Germany, Italy, Holland and England But they were associated, sometimes rightly, with heresy In England in the 14th c. (WYCLIF), and in Bohemia in the 15th c. (Hus), the Church actively suppressed vernacular versions

Philological scholarship was a main concern of the Renaissance. Lorenzo Valla in the early 15th c., and later Erasmus, pioneered a new critical attitude to the text Erasmus produced a new edition of the Greek text of the New Testament (1516) derived from the comparison of manuscripts. It was realized that incessant copying had introduced corruptions, and that it was necessary to find reliable witnesses to the originals. The Protestant reformers thought it important to make the Bible available to the laity in the vernacular. Luther's German version (from 1521) was the stimulus to others, in every European language The opening of the Bible to the laity became a main source of conflict. In Protestant territories, aided by the new technique of printing, the Bible became the source and guarantee of doctrine In Catholic countries [illegible] remained the province of the clergy, and was held less important than the tradition of the Church But even so, versions with approved annotations were eventually allowed some currency

During the 17th [illegible] techniques of scholarship improved, refining the critical attitude to the text The discovery of old and more reliable manuscripts in the original tongues culminated in some sensational finds in the 19th c., and, most sensational of all, the discovery of the Dead Sea Scrolls in the 20th c They are the oldest witnesses to the Hebrew text. No complete manuscript even approaching contemporaneity with the time of writing has been found, but the text of both Testaments has been established with reasonable certainty for most purposes

The other great activity of the 19th c., coinciding with mass-production methods, the spread of literacy [illegible] missionary activity, was the production of Bibles in very large numbers and at very cheap prices by the Bible societies Since then the Bible has been translated into more than 1,100 languages

Bible societies nonsectarian Protestant societies formed to translate, print and distribute Bibles An early German example is the Canstein Bible Society formed at Halle (1710) The British and Foreign Bible Society was formed in [illegible] dates from 1816 Gideon's International, which places the Bible in hotel rooms, was formed at the turn of the century A supranational body, United Bible Societies, was formed in 1946

Boer War a war (1899–1902) between the British Empire and the two Dutch Boer republics, the Orange Free State and the Transvaal. The presence of Uitlanders in the Witwatersrand goldfields, and the question of their civic rights under Boer rule, worsened Anglo-Boer relations and led to an unsuccessful rising (*JAMESON RAID, 1895). In 1899, the Boers under Kruger, the Transvaal president, declared war on Britain, and besieged Mafeking, Kimberley and Ladysmith. These towns were relieved (1900) by Kitchener and Roberts, who rapidly captured Bloemfontein, Johannesburg and Pretoria, and declared the annexation of the Boer states. The Boers, under Botha, De Wet and Smuts, continued guerrilla warfare for two years, but surrendered (May 31, 1902) at Vereeniging. The republics became the British Transvaal and Orange River colonies, and were embodied (1910) in the Union of South Africa. Britain was criticized for her use of internment camps, and the war led to a demand for army reform and to a reaction against imperialism

Bol·i·var (bɔli:vər), Simón (1783–1830), Venezuelan soldier and statesman. During nine years of fighting (1813–22) he liberated Venezuela, New Granada (†COLOMBIA) and Ecuador from Spanish rule, uniting the first two as Greater Colombia (1819) under his presidency, and adding Ecuador (1822). With San Martín and Sucre, he liberated Peru and Upper Peru in 1824 (†BOLIVIA), but failed to achieve a union of these countries in one confederation.

Bo·liv·i·a (bəlɪviə, bɔli:vjə) a republic (area 424,000 sq. miles, pop. 5,914,844) of central South America. Official capital (and seat of the judiciary): Sucre. Actual seat of government: La Paz. People: 54% Indian, 31% Mestizos, 15% of European origin. Official language: Spanish. Indian languages: Aymará and Quechua in the west, Guaraní in the east. State religion: Roman Catholic. The land is 2% cultivated. Two chains of the Andes, the Cordillera Occidental and the Cordillera Real or Oriental (averaging 15,000 ft, highest peak: Illampu, 22,000 ft), cross W. Bolivia, enclosing a plateau, the Altiplano (averaging 13,000 ft), which contains most of the mines and two thirds of the population (mainly subsistence farmers). The eastern seven tenths is an alluvial plain covered with rain forest in the north, grassland and savanna in the south. The eastern foothill valleys (the yungas) are the most productive agricultural region. Average temperatures (F.): 45° in the Altiplano, 50°–70° in the yungas, 73°–80° in the plains. Rainfall: 23 ins. at La Paz, 25–35 ins. in the yungas, 70 ins. (heaviest Nov.–Mar.) in the northeast, 20 ins. in the southeast. Livestock: sheep, cattle, goats, llamas, alpacas. Crops: sugar cane, corn, quinoa, coffee, tobacco, root vegetables, cacao, rubber. Mineral resources: tin (15% of world output), lead, salt, oil, silver (mined at Potosí since 1545), copper, antimony, wolfram, tungsten, zinc. Exports: minerals (95% of exports, tin comprising 64%). Imports: agricultural products (30% of imports), iron and steel products, textiles. Bolivia has free access to the Chilean port of Arica and the Brazilian port of Santos. Other ports used: Antofagasta (Chile), Mollendo (Peru), and river ports on tributaries of the Amazon. Chief navigable rivers: Paraguay, Mamoré, Beni. There are seven universities, the oldest being Sucre (1624). [illegible]

cas overcame the Aymará Indians (14th c.) but were conquered by the Spaniards (1538), who made the country part of the viceroyalty of Peru, and joined it to the viceroyalty of Río de la Plata (1776). It was liberated by Bolívar and Sucre and proclaimed an independent republic (1825), but suffered from political instability (revolution and military dictatorships) and unsuccessful wars. It lost its coastal possessions to Chile in the War of the Pacific (1879–83), it ceded the rich rubber-growing region of the Acre River after disputes with Brazil (1903), and lost the Gran Chaco to Paraguay after a war (1932–5) which exhausted Bolivia. Economic depression and political upheavals continued, culminating in civil war (1949–52). The National Revolutionary Movement, which came to power in 1952, nationalized the big tin industries and estates, and with U.S. aid began to stabilize the economy. But the social revolution began to lose direction and enthusiasm. Although its leader, Víctor Paz Estenssoro, was twice reelected (1960, 1964), he was replaced (1964) by a military junta headed by Gen. René Barrientos Ortuño. As leader of the new Bolivian Revolutionary Front, Barrientos was elected (1966) constitutional president. Following his death in a plane crash (1969), vice president Luis Adolfo Siles Salinas assumed the presidency, introducing to Bolivia the leftist nationalism already established in Peru. In the 186th change of government in less than a century and a half of national existence, Ovando was deposed (1970) by the conservative army chief Gen. Rogelio Miranda. As the country drifted toward armed conflict between the conservative and liberal factions of the army, a compromise was found in the appointment of leftist Gen. Juan José Torres. Torres was overthrown (1971) and replaced by Col. Hugo Banzer Suárez, whose Frente Popular Nacionalista was a coalition of left-wing and right-wing parties. The military took over in 1978 following an election dispute until an interim civilian government was chosen by Congress in 1979. Former pres. Siles Zuazo was reelected in 1980 but prevented from taking office until 1982. Following an election in which no candidate won the necessary majority, in 1985 Congress elected Paz Estenssoro president.

Boll, (bərl), Heinrich (1917–85), German writer whose satirical works explored post-war German society; winner of the Nobel Prize for literature (1972). 'Adam, Where Art Thou?' Book of Common Prayer the service book of the Anglican Communion. Based on the missal and the breviary, but influenced also by continental reforms, it was produced under the direction of Cranmer, and first published in 1549. A revised version (1552), also by Cranmer, showed more Protestant influence, but was abolished in the Catholic reaction (1553–8) under Mary. It reappeared (1559) under Elizabeth in a version which restored certain details of the 1549 book. It was abolished during the Commonwealth (1649–60), but restored (1662) with some liturgical improvements. A modern revision was submitted to parliament (1927 and 1928) but was rejected by the Commons. The 1928 book is nevertheless in partial use in many churches. In the U.S.A. the Episcopal Church adopted a revised version of the Book of Common Prayer (1789), and other revisions took place in 1892 and 1928

Bra·zil (brəzɪl) a federal republic (area 3,288,000 sq. miles, pop. 137,502,000) in South America. Capital: Brasília. Chief cities: Rio de Janeiro, São Paulo. People: 62% European, 11% African, 26% mixed race, with some Asians and a dwindling Indian minority. Language: Portuguese. Religion: 93% Roman Catholic, with Protestant, Spiritist and other minorities. The land is 56% forest, 40% pasture and 4% cultivated. The Amazon basin covers the northern half of the country. Rain forest (selva) along the river gives way to grassland (campos) and savanna as the land rises, north and south, to the Guiana and Brazilian highlands. The latter (mainly 1,500–3,000 ft), covering all of central Brazil, culminate in a mountain system running along the Atlantic from Porto Alegre to Salvador (highest point: Pico de Bandeira, 9,462 ft). The eastern part contains the great plantations, the west (Mato Grosso) is arid savanna, as also is the northeastern bulge (the Sertao). The coastal plain is tropical and subtropical. Rainfall: 70–90 ins in the Amazon basin, 43 ins in Rio de Janeiro, 40–70 ins in the Brazilian highland, 10–30 ins in the northeast. Average winter and summer temperatures (F.): Manaus 80° and 83°, Rio de Janeiro 70° and 79°, Goiaz 72° and 78°, Recife 77° and 82°, Belo Horizonte 62° and 72°, Porto Alegre 56° and 76°. Livestock (Brazil is the world's biggest producer, ahead of Argentina): cattle, hogs, sheep, goats, horses. Crops: coffee (southeast), castor beans (world's chief producer of both), oranges and cocoa (northeast), sugar and tobacco (northeast). Other produce: bananas, cotton lint and seed, vegetable oils, rice, manioc, corn (south), rubber (Amazon basin), vines. The fishing industry is nationalized. Mineral resources: high-grade quartz crystal, iron (in Minas Gerais, E. central Brazil, rich deposits largely unexploited), chrome ore, mica, zirconium, beryllium, graphite, titanium ore, magnesite, thorium, manganese ore, tungsten, coal, gold, silver, oil, salt. Manufactures: cotton (employing 25% of all industrial workers), food processing, paper. Exports: coffee (60% of exports), cotton, hides, wool, meat, cocoa, lumber, tobacco, carnauba wax, foodstuffs. Imports: machinery, petroleum, vehicles, wheat. Chief ports: Rio de Janeiro and Santos. There are 22 state universities and three Roman Catholic ones. Monetary unit: cruzeiro (100 centavos). HISTORY Brazil, inhabited by seminomadic Indian tribes, was allocated to Portugal by the Treaty of Tordesillas (1494), although it was actually discovered (1500) by Cabral. The Spanish, Dutch and French disputed various territories (16th and 17th cc.). By the 18th c. Brazil supplied most of Europe's sugar, and imported African slaves in great numbers to work in the plantations. The Portuguese court fled to Brazil (1808) when Napoleon invaded Portugal, and the united kingdom of Portugal and Brazil was ruled from Brazil (1815–21). The independent empire of Brazil was pro-

s and Paraguay (1865–70). After a bloodless military coup, it became a federal republic (1889) with separation of Church and State, and the constitution of the United States of Brazil was adopted (1891). It declared war on Germany (1917). Brazil suffered from the inter-war world depression, losing its markets for coffee and rubber. Getulio Vargas, after a re-

Bud·da·hood (budəhud, bu.dəhud) *n.* (*Mahayana Buddhism*) a state of enlightenment

Bud·dha (budə, bu:də), Gautama (563–483 B.C.), the Indian founder of Buddhism. The son of a nobleman and member of the Kshatriya caste, Siddhartha Gautama was born on the present borders of India and Nepal. It is told that at 29 he first saw a senile old man, a sick man, a corpse and a wandering ascetic. With eyes opened to aspects of life newly revealed to him, he broke with his past and became an ascetic, but after six years he abandoned rigorous asceticism for the deep meditation that brought enlightenment. He soon collected many disciples, and spent his remaining 45 years of life teaching, organizing and serving the order of mendicants which he founded. He is also known by the titles Sākyamuni ('the sage of the Sakya family') and Tathāgata ('the follower of truth') [Skr. ... the enlightened one]

Bud·dha·gho·sa (budəgousə, bu:dəgousə) (5th c. A.D.), orthodox and encyclopedic commentator on Buddhist doctrine, probably of Ceylon

Bud·dhism (budizəm, bu.dizəm) *n.* a religious and philosophical system springing from the life and teaching of Gautama Buddha, who in the 6th c. B.C. rejected certain features of his native Hinduism, particularly the caste system, animal sacrifice and undue asceticism. He founded an order of mendicant preachers, including both sexes, and his first sermon to his disciples at Benares is the root of all later developments. In this sermon he preached the Four Noble Truths. (1) that sorrow is the universal experience of mankind (2) that the cause of sorrow is desire, and the cycle of rebirths is perpetuated by desire for existence (3) that the removal of sorrow can only come from the removal of desire (4) that desire can be systematically abandoned by following the Noble Eightfold Path. With the cessation of desire man passes from the world of individual existence into the world of pure Being (Nirvana). Because his concern was primarily practical, Gautama refused to speculate on the nature of Being, or on the nature of the individual self. He did, however, show the fallacies of some of the current theories, and has been regarded as a naturalistic atheist by many among both critics and disciples. He taught that man's release from sorrow was not obtainable by any act of sacrifice or pilgrimage which might be interpreted as trying to gain the favor of a deity. He also taught that this release came from the all-absorbing knowledge that man's selfish desires were rooted in dualistic delusions about the self.

Gautama's original teachings have been developed along two distinct and often conflicting lines. Theravada, disparagingly called Hinayana (found mainly in Ceylon, Burma, Thailand, and parts of Malaysia), and Mahayana (which developed in China, Tibet, Korea, and Japan). Theravada has laid stress on monastic disciplines, and has resisted any attempts to compromise with theism in any form. Within Mahayana, however, the idea of Gautama as an incarnation of 'the Buddha-spirit' has grown

bodhisattva. In Theravada the ideal, the 'saint', is the arhat, the man who has gained personal enlightenment; in Mahayana it is the bodhisattva, the man who has attained enlightenment: Buddhahood, but who has set aside his movement of Nirvana in order to help others make the journey that he has already completed. The furthest development of Mahayana [illegible] direction is to be found in the Pure Land (Jodo) school, particularly in its Japanese form. Here, salvation comes solely from faith in the loving grace of the bodhisattva Amida. The Jodo doctrine is classified as tariki ('by another's effort'), in contrast with the more orthodox forms of Buddhism which are jiriki ('by self-effort'). Another well-known form of Mahayana is the Zen school. According to some, Zen is a fusion of Buddhism with Taoism. It shares with the latter a profound distrust of the human intellect, and points its adherents to an enlightenment (satori) which comes only when the subconscious is set free to resolve the false dualities of existence which cannot be resolved by rational means. Buddhism has some 500,000,000 adherents, largely in Asia

Burma, Union of a republic (area, 261,610 sq. miles, pop. 36,196,000) in S.E. Asia. Capital: Rangoon. It includes Burma proper, four semi-autonomous states (Shan, Karen, Kachin and Kayah) and one special division (Chin). Ethnic and linguistic groups: Burmese (66%), Karens (7.5%), Shans (6.5%), and smaller groups of Kachins, Indians, Chins, Mons, Chinese, Palaung-Was. Official language: Burmese. Religion: 84% Hinayana Buddhist (the state religion), with Animist, Moslem, Hindu and Christian minorities. The land is 57% forest. Lower Burma is the coastal region, Upper Burma is inland. Four great rivers, the Irrawaddy and Chindwin, which form a central plain, and in the east the Sittang and Salween, run north-south between mountain ranges (3,000–8,000 ft). In the north are the mountains of Tibet (passes at 12,000 ft, the highest point in Burma being Hkakabo Razi, 19,296 ft). In the south lies the Irrawaddy delta. The west coasts are swampy. The climate is hot and humid, dominated by the wet summer monsoon: May–Sept., wettest in July. Rainfall: Rangoon 100 ins., Mandalay 35 ins., Arakan and Tenasserim 200 ins. Average temperature (F.): Rangoon 77° (Jan.), 88° (Apr.), Mandalay 70° (Jan.), 90° (Apr.). Livestock: oxen, water buffalo. Crops: rice, sesame, pulses, peanuts, millet, cotton, sugarcane. The Irrawaddy is navigable up to Bhamo (900 miles) and its tributary the Chindwin for 390 miles. University (1920), at Rangoon. Monetary unit: kyat (divided into 100 pyas). HISTORY. Burma was settled (7th c.) by the Pyus, the Shans and the Mons. The Burmese came from Yunnan (9th c.) and founded a kingdom (11th c.) at Pagan. After the Mongol invasion (1287), most of the country was ruled by the Shans (1287–1531) and the Mons (1740–52). Under the reign (1752–60) of the Burmese Alaungpaya and his descendants, Siam was defeated (1767) and Arakan, Manipur and Assam were annexed (1785–1819). After three Anglo-Burmese wars (1824–6, 1852–3, and 1885–6), Burma became a province of British India (1886–1937) and a Crown Colony (1937). Following the Japanese invasion (1942–5) Burma became independent (Jan. 4, 1948). Rebellions, discontent among minorities, and economic instability culminated in civil war in the late 1950s. In 1958, Premier U Nu asked Gen. U Ne Win to take over the government; order was restored and in 1960 a civilian government under Nu was returned to power. However, in 1962 Ne Win led a military coup and resumed control of the government. He resigned as president in 1981 in favor of U San Yu, former army chief. A 1981 legislative act restricts politico/economic rights to descendants of Burmese nationals

Byzantine Empire the Eastern Roman Empire [illegible] Byzantium (330 A.D.), renamed it Constantinople, and made it the new capital of the Roman Empire. The Empire was divided (395), and the western part was overrun by the barbarians (5th c.). The Eastern Empire, ruled from Constantinople, chiefly comprised Asia Minor, the Balkan peninsula and Egypt. The dominant language was Greek, though Latin was in official use. Constantine I made Christianity the official religion (313), and the Orthodox Church refuted the heresies of Arianism (381) and Nes[illegible] Justinian I, the Empire was extended to Italy and N. Africa. Roman law was codified, and there was a revival of art, architecture, literature and music. N. Italy was lost to the Lombards (by 580). The Avars threatened Constantinople (610), but were driven back by the Heraclian dynasty (610–711). The Arabs captured Egypt, N. Africa and Syria, and attacked Constantinople (673–8). Under the Syrian dynasty (717–802) the Arabs were finally crushed (717–8), and Asia Minor was recovered. With the outbreak of iconoclasm, and the crowning of Charlemagne as Emperor of the West (800), the Byzantine Empire lost its claim to universality. The Macedonian dynasty (876–1057) consoli[illegible] Empire. Economic prosperity flourished [illegible] philosophy and architecture. After 1025, most of Asia Minor was lost to the Turks, S. Italy was conquered by the Normans, and the Bulgars and Serbs revolted, but parts of Asia Minor were recovered under the Comnenus dynasty (1081–1185). The Greek and Roman Churches split definitively (1054). Constantinople was sacked (1204) by the 4th Crusade, and the Latin Empire of Constantinople was set up. The rest of the Byzantine Empire was broken up into independent states, but was partially restored under the Palaeologus dynasty (1261–1453). The Empire finally collapsed with the capture (1453) of Constantinople by the Ottoman Turks. The Byzantine Empire protected western Europe against barbarian attacks, and preserved the classical traditions, esp. of Roman political theory and of Greek culture, from which the Renaissance developed.

The natural units of our calendar are the day [illegible] year, one revolution of the earth around the sun), whereas the month and week are conventional subdivisions of the solar year. In ancient times, however, the month was equated with a natural division of time, i.e. the lunar cycle (the revolution of the moon around the earth). As 12 lunations comprise only 354 of the solar year's 365 days, peoples using lunar calendars were forced to intercalate a 13th month from time to time to keep a fixed relationship between months and seasons, or else accept that each month goes the round of the seasons within a certain period. Julius Caesar introduced the solar, Julian calendar in 45 B.C. It contained an error of intercalation amounting to eight days in a thousand years and was therefore revised in the 16th c. by Pope Gregorius XIII. The shift that had occurred between months and seasons since Caesar's day was put right by the abolition of ten days and by a revision of the Julian method of calculating leap years. Protestant Europe did not immediately adopt the Gregorian calendar: in England it was not introduced until 1752. In Russia the transition was not accomplished until after the Bolshevik Revolution

Inland waterways provide an extensive transportation network for goods and passengers. Buddhist University at Phnom Penh. Monetary unit: riel. HISTORY. Indian emigrants established the Funan kingdom and introduced their culture and religion in the 1st c. By the 6th c. the Khmer Empire had arisen, reaching its zenith in the 9th c., when it developed a remarkable architecture (**ANGKOR**). Invasions by the Thais and Annamese during the subsequent centuries forced the king to ask for French protection in 1863. Cambodia became part of French Indochina (1887). A series of treaties (1904, 1907, 1946) with Laos and Thailand returned several former provinces to Cambodia. In 1947 a constitutional monarchy was created. Cambodia became (1949) an associated state in the French Union and declared (1953) its independence. Following an invasion (1954) of Communist Vietnamese forces, the Geneva Conference (1954) provided for the withdrawal of foreign forces from Cambodian territory. Upon the death of king Norodom Suramarit (1896–1960), his son, Prince Norodom Sihanouk, prime minister since 1955 and previously king (1941–55), became chief of state again. His rule was marked by a policy of neutrality toward the Vietnam War. Following a right-wing coup d'état (Mar. 1970), Cheng Heng became head of the Phnom Penh government, advocating a policy of 'pro-American neutrality.' On Apr. 30, 1970 U.S. President Richard Nixon announced the invasion of Cambodia by U.S. and South Vietnamese forces in search of North Vietnamese headquarters, arms stockpiles, and Vietnamese refugees. U.S. ground combat forces were withdrawn by July 1, 1970, but South Vietnamese forces remained, supported by U.S. air power. Cambodia became (1970) a republic. The Communist Khmer Rouge took Phnom Penh (1975) and drove the entire urban population into the countryside. Hundreds of thousands of people died of malnutrition, exhaustion, and through executions and purges within the Khmer Rouge movement. The country was almost totally isolated from the outside world. The Vietnamese army overran Phnom Penh (1979) and Khmer Rouge defectors headed by Heng Samrin established a Vietnamese-style 'people's' republic. Khmer Rouge forces fled to the border with Thailand and began guerrilla resistance. A coalition government was formed (1982) with Sihanouk, Son Sann and the Khmer Rouge. The Association of Southeast Asian Nations (ASEAN) helped arm this group and insisted on Vietnam's leaving the country, and the UN refused to admit the Vietnam-backed government. The Vietnamese, backed by the U.S.S.R., continued assaults along the Thai border

Can-a-da (kænədə) an independent state (area 3,851,809 sq miles, pop 24,343,181) in North America, and a federal dominion within the British Commonwealth. Capital: Ottawa. Largest towns: Montreal, Toronto. The population is 48% of British origin, 31% of French origin, 1% Indian and Eskimo, with German, Ukrainian, Scandinavian, Dutch, Polish and other minorities. French Canada is centered in the province of Quebec. Languages: 67% English only, 20% French only, 13% bilingual. Religion: 46% Roman Catholic, 45% Protestant, with Jewish, Orthodox and Mennonite minorities. The land is 5% arable and 46% forest. The Canadian Shield stretches from the Mackenzie River to the St Lawrence estuary. The maritime provinces of the east comprise a northern continuation of the Appalachians, stretching from the Green Mtns to Gaspe peninsula (rising to 4,160 ft) and to Newfoundland. Half the population lives in the St Lawrence lowlands, between Quebec and Lake Huron. North of the Canadian Shield stretches the largely unexplored Arctic Archipelago with heights over 7,000 ft e.g. in Baffin and Ellesmere Is. North of the vast interior prairies (Manitoba lowland, Alberta upland rising to 4,000 ft and foothills belt) are the sparsely inhabited Northwest Territories. In the west are three belts of mountains (main ranges: Rocky Mtns and Coast Mtns). Highest peak: Mt Logan (19,850 ft) in the W. Yukon. The interior is covered with snow for 3 months of the year, and frost-free for only 2–3 months. Annual rainfall: St John's, Newfoundland 54 ins, Montreal 41, Toronto 32, Winnipeg 21, Dawson 13, Victoria 30. Average temperatures (F., Jan. and July): St John's 23°, 60°; Montreal 14°, 70°; Toronto 23°, 69°; Winnipeg −3°, 67°; Dawson −21°, 60°; Victoria 39°, 60°. Livestock: cattle, horses, sheep, pigs, poultry. Agricultural products: cereals (esp. wheat in Saskatchewan), dairy products (Ontario and Quebec), fruit (Ontario and British Columbia), tur, tobacco, eggs and poultry, maple products, vegetables. There are large irrigation projects in Alberta and British Columbia. Resources: lumber, fish (esp. salmon, lobster and cod), nickel, uranium, copper, gold, zinc, oil (in Alberta), coal, natural gas, asbestos, salt, silver, cobalt, gypsum. Manufactures: foodstuffs, iron and steel, paper goods, transport equipment, machinery, metal products, oil and coal products, wood pulp and products, electricity, textiles. Exports: newsprint, paper, wheat, wood, minerals, fish. Imports: vehicles, machinery, fuel oil. Ports: Montreal, St John's, Halifax on the Atlantic (the last two ice-free all year), Vancouver, Prince Rupert on the Pacific, Churchill on Hudson Bay, Port Arthur on Lake Superior. Chief universities: McGill (Montreal, 1821), Toronto (1827), Laval (Quebec, French language, 1852), Montreal (French language, 1876). Monetary unit: Canadian dollar (100 cents). HISTORY. John Cabot discovered Canada (1497), Jacques Cartier explored the St Lawrence (1534–42), Samuel de Champlain founded Quebec (1608) and penetrated the interior (1603–16). The French colonized along the St Lawrence, and part of the New France was granted by Richelieu to the Company of 100 Associates (1627), and subsequently returned to the French crown in 1663. Montreal was founded by Maisonneuve (1642). Acadia was ceded to the English by the Treaty of Utrecht (1713) and renamed Nova Scotia. Anglo-French rivalry culminated in the Seven Years' War (1756–63) and nearly all the rest of French Canada was ceded to England by the Treaty of Paris (1763). French liberties being guaranteed by the Quebec Act (1774). Upper Canada (British) and Lower Canada (French) were created by an Act of 1791, but were united into one province by the Act of Union (1840) and given internal self-government (1848) (†DURHAM REPORT). The maritime provinces became self-governing (1848–51). The Dominion of Canada was established under the first prime minister, Sir John Macdonald, by the British North America Act (1867), and formed the Confederation of the provinces of New Brunswick, Nova Scotia, Quebec and Ontario, to which were added the provinces of Manitoba (1870), British Columbia (1871), Prince Edward Island (1873), Alberta and Saskatchewan (1905), and Newfoundland (1949). The Hudson's Bay Company, chartered by Charles II (1670), was purchased by the Confederation (1869). Canada settled its boundary disputes with the U.S.A. over Oregon (1846) and Alaska (1903) and now shares a 5,000-mile undefended frontier. The Canadian Pacific Railway (1885) led to the opening up of the prairies and the Northwest. Canada fought on the side of the Allies (1914–18). Independence was formally recognized by the Statute of Westminster (1931). Canada fought as an ally of Britain (1939–45), and greatly developed its industries and agriculture. Except for Diefenbaker's conservative government (1957–63) Canada had liberal governments from 1935 to 1979: Mackenzie King (1935–48), L. Saint-Laurent (1948–57), Lester B. Pearson (1963–8) and P. E. Trudeau (1968–79). Trudeau responded to the terrorist provocation of the separatist Front de Libération du Québec by invoking (1970) emergency police powers under Canada's 1914 War Measures Act, which had never before been used in time of peace. The Parti Quebecois, committed to making Quebec an independent republic, came to power (1976), causing a crisis that, together with economic problems, led to the Liberal defeat (1979). Joseph Clark's minority government lasted less than a year and Trudeau and the Liberals took over again (1980). A referendum in Quebec (May 1980) rejected the proposal for political independence. Trudeau resigned (1984) and was succeeded by John Turner, but later that year Brian Mulroney and the Conservatives won an overwhelming victory—211 of the 282 parliamentary seats. Canada has close economic ties with the U.S.A., while maintaining trading connections by preferential tariff with Britain and other Commonwealth countries. It joined the U.N. (1945) and NATO (1949)

Car·a·velle (kærəvel) *n.* twin-engine transport plane (SE 210) for 64–80 passengers produced in France by SudAviation since 1955

car·a·way (kærəwei) *n.* *Carum carvi*, fam. *Umbelliferae*, a plant with flat yellow flower heads, and seeds used as flavoring. They contain the aromatic oil carvone [perh. fr. M.L. *carui*]

car·bam·ide [illegible]

carbaryl ($C_{12}H_{11}O_2N$) (kurbəril) *n.* a biodegradable insecticide used in agriculture

car·bazo·chrome ($C_{16}H_{17}N_3O_3$) (kurbeizə- [illegible] used to control capillary bleeding, marketed as Andrestat, Andrenosem, and Anaroxyl

car·ba·zole (kurbəzoul) *n.* a weakly basic crystalline compound ($C_6H_4)_2NH$ found with anthracene in coal tar. It is used for a number of dyes

carbecue (kurbəkju) *n.* device for turning an abandoned automobile into compact metal by applying heat and pressure

carbed (kurbed) *n.* portable bed adapted for [illegible]

car·ben·i·cil·lin ($C_{17}H_{18}N_2O_6S$) (kurbenəsilin) *n.* (*pharm.*) form of semisynthetic penicillin with a broad-spectrum effect against gram-negative and gram-positive organisms; marketed as Geopen and Pyopen

car·bide (kurbaid) *n.* (*chem.*) a binary compound of carbon usually with a metal; calcium carbide

car·bine (kurbain) *n.* (*hist.*) a short, light, cavalry rifle [older *carabine* fr. F.]

car·bi·nol (kurbinoul, kurbinɔl) *n.* methyl alcohol [fr. *carbin*, name used by Kolbe for the methyl radical]

Car·bo·caine ($C_{17}H_{27}N_3O$) (kurbəkein) *n.* (*pharm.*) trade name for mepivacaine, painkiller used by athletes to enable them to continue to play while injured

[illegible] bon atoms, esp. alicyclic and aromatic compounds

[illegible] biologically important group of neutral organic chemicals composed of carbon, hydrogen and oxygen and including sugars, starches and celluloses. Naturally occurring carbohydrates are produced by green plants photosynthetically from carbon dioxide and water, and are used for providing the energy necessary for growth and other functions. The carbohydrates are a major class of animal foods, the others being proteins [illegible]

car·bolic acid (kurbɔlik) phenol

car·bon, (kurbən) *n.* a tetravalent element (symbol: C, at. no. 6, at. mass 12.01115). It occurs in crystalline forms as diamonds and graphite. Combined with other elements, it occurs in all living things, and in carbonates in the earth's crust. It can be obtained in an amorphous condition as lampblack and charcoal. The study of carbon compounds constitutes organic chemistry. The radioactive isotope, carbon 14, is used as a tracer and in dating archaeological and geological specimens [fr. F. *carbone*]

[illegible] charcoal; (*chem.*) containing carbon; (*geol.*) containing coal [fr. L. *carbo* (*carbonis*), coal]

car·bo·na·do (kurbəneidou) *n.* a hard black aggregate of diamond particles in a diamond matrix, with valuable industrial uses [Span. *carbonada* fr. *carbon*, charcoal]

carbon arc a continuous discharge of intense light and heat produced when an electric current crosses the gap between two carbon rods [illegible]

Car·bo·na·ri (kurbənəri) the members of a secret society, dedicated to liberal ideas, which originated (1807) in S. Italy and appeared (1820) in France and Spain. Its part in the fight for Italian unity was taken over by the Risorgi [illegible]

Carbon isotopes and nitrogen isotopes play a catalytic role in the cycle followed by carbon in living beings. It consists of photosynthesis by [illegible] by plants and animals which obtain their food directly or indirectly from them, back to carbon dioxide

[illegible] of an ancient artifact by measuring the proportion to residual carbon of radioactive carbon 14 (C_{14}), which has a half-life of 5568 yrs). *syn* carbon 14 dating, radiocarbon dating. **-carbon-** [illegible]

carbon dioxide a colorless, heavy gas, CO_2, that does not support combustion, that dissolves in water to form carbonic acid and that is [illegible] compounds (e.g. in animal respiration) and by the action of acid on carbonates. It is absorbed from air by green plants in the first step of photosynthesis, and it has many scientific, technical and industrial uses

carbon dioxide laser [illegible] oxide, helium, and nitrogen. It is used for communication, welding, heating, cutting, drilling, evaporating, and optical radar

carbon disulfide an inflammable liquid, CS_2, used as an insecticide and as a solvent in the vulcanization of rubber and in the manufacture of viscose rayon

carbon fiber [illegible] great strength and light weight

car·bon·ic (kurbɔnik) *adj.* pertaining to or obtained from carbon

carbonic acid [illegible] known only in aqueous solution and by its salts, the carbonates

carbonic acid gas carbon dioxide

carboniferous [illegible] coal **Carboniferous** of the period or system of the Paleozoic era characterized by coal-bearing [illegible] the Carboniferous period or system of rocks [fr. L. *carbo* (*carbonis*), coal + *ferre*, to bear]

car·bon·i·za·tion (kurbənizeiʃən) *n.* the process of [illegible]

car·bon·ize (kurbənaiz) *pres. part.* **car·bon·iz·ing** [illegible] **car·bon·ized** to convert into carbon; to turn (coal or wood) by slow combustion into coke or charcoal; to char; to cover (paper) with carbon

carbon microphone (*acoustics*) microphone in which the diaphragm responds to varying pressures, changing the resistance of a container of [illegible]

carbon monoxide a colorless, odorless, highly toxic gas, CO, that may be produced by the incomplete combustion of carbon, e.g. when coal is converted to coke. It burns with a blue flame to give carbon dioxide

carbon monoxide laser (*optics*) gas laser uti- [illegible]

carbon paper a paper coated on one side with loosely adhering dye (originally a carbon compound) for writing, typewriting, drawing etc

carbon spot black spot on a coin, esp. noted in numismatics

carbon star (*astron.*) star with a reddish appearance

carbon tetrachloride [illegible] klouraid) a colorless, toxic, noninflammable liquid, CCl_4, used as a solvent (e.g. for greases) and as a fire extinguisher

[illegible] compound of a metal with the CO group, e.g. nickel carbonyl $Ni(CO)_4$

car·borne (kurbɔrn) *n.* carbon-hydrogen compound with exceptional thermal qualities. [illegible]

carborundum [illegible] any of [illegible] range of abrasives, esp. silicon [illegible]

[illegible] ristic of a large class of organic acids, e.g. acetic acid. The [illegible] containing one or more carboxyl groups ($-COOH$) [illegible]

carboy [illegible] and transporting acids and other corrosive liquids, or distilled water [fr. Pers. *qarabah*, large

Carnot, Nicolas Leonard Sadi (1796–1832), French physicist, son of Lazare Carnot. His 'Reflexions sur la puissance motrice du feu' (1824) deals with the relation between heat and mechanical energy. He formulated the second law of thermodynamics and conceived the mathematical idea of an ideal heat engine (⁺CARNOT CYCLE, ⁺CARNOT'S PRINCIPLE)

Carnot cycle an ideal reversible heat transfer cycle involving a fluid (usually) as a working substance and consisting of an isothermal expansion, an adiabatic expansion, an isothermal compression and an adiabatic compression back to the original state, where each step is carried out reversibly. The Carnot cycle accomplishes the conversion of heat to work with the theoretical maximum efficiency and was historically important in the development of thermodynamics, particularly for the concept of entropy

Carnot heat engine an idealized arrangement for converting heat energy into mechanical work and vice versa, by means of one or more linked Carnot cycles

Char·le·magne (ʃärləmein) (c. 742–814), Charles I, emperor of the West (800–14) and king of the Franks (768–814), son of Pépin the Short. After defeating the Lombards (774), he conquered Saxony (772–804), thus ruling a vast empire bounded by the North Sea, the Elbe, Bavaria, Carinthia, Lombardy, the Mediterranean, the Pyrenees and the Atlantic. He intervened (799) to save Pope Leo III from deposition, and was rewarded with the title of Holy Roman Emperor (800). At the end of his reign he had to defend his frontiers from attacks by Vikings and Saracens. His reign was notable for administrative, judicial and ecclesiastical reforms, and for the development of foreign trade. Charlemagne's palace was the center of a great intellectual revival under the leadership of Alcuin.

Charles II the Bald (823–77), Holy Roman Emperor (875–7) and as Charles I, king of France (843–77), son of Louis I. With his brothers Louis the German and Lothair I, he divided Charlemagne's empire by the Treaty of Verdun (843). He assumed the title of Holy Roman Emperor (875) and as Charles I, king of France (843–77), son of Louis I. With his brothers Louis the German and Lothair I, he divided Charlemagne's empire by the Treaty of Verdun

Charles III 'the Fat' (839–88), Holy Roman Emperor (881–7), king of Italy (879–87) and as Charles II, king of France (884–7), son of Louis the German. He failed to relieve Paris from a Norman siege (885), and was deposed (887).

Charles IV (1316–78), Holy Roman Emperor (1355–78), king of Germany and Bohemia (1346–78). After fighting the deposed Louis IV for the German throne, he issued (1356) the Golden Bull, which laid down rules for the elec-

Charles VI (1685–1740), Holy Roman Emperor and, as Charles III, king of Hungary (1711–40), son of Leopold I. His claim to the Spanish throne involved the Empire in the War of the Spanish Succession (1701–14). To ensure the succession of his daughter Maria Theresa to his dominions he induced the great powers to guarantee the Pragmatic Sanction (1713). He again fought with France and Spain in the War of the Polish Succession (1733–5), and with the Turks (1737–9).

Charles VII (Karl Albrecht, 1697–1745), Holy Roman Emperor (1742–5) and elector of Bavaria (1726–45). Having married a daughter of Joseph I, and refusing to recognize the Pragmatic Sanction, he allied with Frederick II of Prussia in the War of the Austrian Succession (1740–8). He was accordingly elected emperor (1742).

Charles I (1600–49), king of England, Scotland and Ireland (1625–49), son of James I. His conflict with parliament began with his marriage (1625) to Henrietta Maria of France, and grew as he confided in such favorites as Buckingham and pursued the High Church policy of Laud. His early parliaments tried to control royal policy by withholding supplies, and Charles attempted to levy taxes without parliamentary consent. Financial difficulties forced him to sign (1628) the Petition of Right. Buckingham was assassinated (1628). Charles ruled (1629–40) without parliament, through his minister Strafford, but conflict continued in the courts, notably in the case (1638) of John Hampden. A Scottish invasion (1640) forced Charles to summon (1640) the Long Parliament, which executed Strafford and Laud, and drew up (1641) the Grand Remonstrance. The king attempted to arrest the five members responsible for this (1642) but was forced to flee to York. With the battle of Edgehill (1642) began the Civil War (1642–52). Charles took refuge (1646) with the Scottish army, and was betrayed (1647) to the English army under Cromwell. After Pride's Purge (1648), Charles was tried and executed (1649).

Charles II (1630–85), king of England, Scotland and Ireland (1660–85), son of Charles I. In exile after the battle of Naseby (1645), he returned (1650) to Scotland, was defeated (1651) at Worcester by Cromwell, and fled to France. He was restored (1660) to the throne, and was at war (1665–7) with the Netherlands, in the course of which a Dutch fleet ravaged the Thames (1667). London had been hit by plague (1665) and fire (1666). Charles dismissed his minister Clarendon (1667) and gave power to the even less popular cabal of five ministers. The king signed (1670) the secret Treaty of Dover, promising to join France in war against the Netherlands and to declare himself a Roman Catholic. The Dutch War (1672–4) was unpopular and unsuccessful, and parliament forced Charles to revoke the Declaration of Indulgence (1672) and to consent to the Test Act (1673). Fears of a Popish plot grew with the affair (1678) of Titus Oates, and a Whig opposi-

pleasure-loving character set the tone of a dissolute court, reflected in the Restoration comedies. Nevertheless, his reign saw great colonial, maritime and commercial expansion, the foundation of the Royal Society (1660), and great
